At its core, ecological informatics combines developments in information technology and ecological theory with applications that facilitate ecological research and the dissemination of results to scientists and the public. Its conceptual framework links ecological entities, genomes, organisms, populations, communities, ecosystems, landscapes with data management, analysis and synthesis and communicates new findings to inform decisions by following the course of a loop. It reflects the significant advances in data management, analysis and synthesis that have been made over the past 10 years, including new remote and in situ sensing techniques, the emergence of ecological and environmental observatories, novel evolutionary computations for knowledge discovery and forecasting and new approaches to communicating results and informing decisions. *Participation of Young People in Governance Processes in Africa* Kurebwa, Jeffrey, Dodo, Obadiah, 2019-06-28 Active political engagement requires the youth of today to begin their journeys now to be leaders of tomorrow.
