Applied Studies In Climate Adaptation:

Applied Studies in Climate Adaptation Jean P. Palutikof, Sarah L. Boulter, Jon Barnett, David Rissik, 2014-12-31 The book advances knowledge about climate change adaptation practices through a series of case studies. It presents important evidence about adaptation practices in agriculture, businesses, the coastal zone, community services, disaster management, ecosystems, indigenous populations and settlements, and infrastructure. In addition to 38 case studies across these sectors, the book contains horizon scoping essays from international experts in adaptation research including Hallie Eakin, Susanne Moser, Jonathon Overpeck, Bill Solecki, and Gary Yohe. Australia's social ecological systems have a long history of adapting to climate variability and change, and in recent decades has been a world leader in implementing and researching adaptation, making this book of universal relevance to all those working to adapt our environment and societies to climate change.

Climate Change Adaptation in the Built Environment Chamindi Malalgoda, Dilanthi Amaratunga, Richard Haigh, Shavindree Nissanka, Nishara Fernando, Ruben Paul Borg, Mo Hamza, 2025-05-02 Global climate change is one of the greatest environmental threats facing humanity, and it is affecting every country on every continent. Recent evidence confirms a close liaison between climate change induced hazards and the built environment, as the built environment demonstrates a high fragility and vulnerability to hazardous situations. The impact of climate change is particularly pertinent to the built environment given the life expectancy of buildings and the fact that it is essential to adapt the existing built environment to deal with a climate that may be significantly different from that in which it evolved. Coastal regions are highly vulnerable to climate change because, in addition to changes in temperature, precipitation, and more frequent flooding, they will be affected by rising sea levels, wave heights, and accelerated coastal erosion. The built environment exerts considerable influence over coastal communities, local climate, and environment. Coastal areas also tend to be highly populated with many vulnerable urban centres located near the coastal belt. In addressing such challenges, it is important to better understand the impacts of climate change on the built environment and to develop tangible climate adaptation measures for the built environment.

Innovation in Climate Change Adaptation Walter Leal, 2016-01-16 This book introduces innovative approaches to pursue climate change adaptation and to support the long-term implementation of climate change policies. Offering new case studies and data, as well as projects and initiatives implemented across the globe, the contributors present new tools, approaches, and methods to pursue and facilitate innovation in climate change adaptation.

The Economic, Social and Political Elements of Climate Change Walter Leal Filho, 2010-11-23 A unique feature of this book is its strong practice-oriented nature; it contains a wide range of papers dealing with the social, economic, and political aspects of climate change, exemplifying the diversity of approaches to climate change management taking place all over the world in a way never seen before. In addition, the book describes a number of projects and other initiatives happening in Africa, Asia, Europe, Latin American, and the Australasian region, providing a profile of the diversity of works taking place today. *Communicating*
