Each question carries one mark.

 $50 \times 1 = 50$

1. The production line of a chip manufacturing unit wants to simulate the probability of a chip being manufactured defective. Common sense says that the probability of a chip being defective does not depend on whether or not the previous chip was defective. Hence, the probability distribution, appropriate for the situation, is
(A) uniform (B) normal (C) binomial (D) triangular.
2. The data structure useful for the breadth first search of a graph is
(A) stack (B) queue (C) linked list (D) dequeue.
3. Merge sort uses
(A) greedy methodology (B) divide and conquer methodology
(C) dynamic methodology (D) heuristics with back tracking.
4. A municipality stored details about every house in its perview as a 'structure', each containing a large number of details. These are to be sorted. The best approach is
(A) sort them directly
(B) store them in an array and sort the array
(C) store pointers to them in an array and sort the array
(D) store them in a linked list and sort the linked list.
5. The height of a binary tree is defined as the maximum number of edges in any path from the root to the leaf. The maximum number of nodes in any binary tree of height h is
(A) 2^h (B) $2^{h-1} - 1$
(C) 2^{h+1} (D) $2^{h+1} - 1$.
6. The principle of cache memory is primarily based on
(A) the principle of locality of reference
(B) the heuristic 90 - 10 rule
(C) the fact that the entire program is not required at once
(D) the faster memories also tend to be costlier.

Vibrant Architecture Rachel Armstrong, 2015-08-17 This book sets out the conditions under which the need for a new approach to the production of architecture in the twenty first century is established where our homes and cities are facing increasing pressures from environmental challenges that are compromising our lives and well being Vibrant architecture embodies a new kind of architectural design practice that explores how lively materials or vibrant matter may be incorporated into our buildings to confer on them some of the properties of living things such as movement growth sensitivity and self repair The theoretical and practical implications of how this may occur are explored through the application of a new group of materials Characteristically these substances possess some of the properties of living systems but may not have the full status of being truly alive They include forms of chemical artificial life such as dynamic droplets or synthetically produced soils As complex systems they are able to communicate directly with the natural world using a shared language of chemistry and so negotiate their continued survival in a restless world Vibrant architecture may create new opportunities for architectural design practice that venture beyond top down form finding programs by enabling architects to co design in partnership with human and nonhuman collectives which result from the production of post natural landscapes Ultimately vibrant architecture may operate as an ecological platform for human development that augments the liveliness of our planet rather than diminishes it

Situational Method Engineering Brian Henderson-Sellers, Jolita Ralyté, Pär J. Ågerfalk, Matti Rossi, 2014-06-03 While previously available methodologies for software like those published in the early days of object technology claimed to be appropriate for every conceivable project situational method engineering SME acknowledges that most projects typically have individual characteristics and situations Thus finding the most effective methodology for a particular project needs specific tailoring to that situation Such a tailored software development methodology needs to take into account all the bits and pieces needed for an organization to develop software including the software process the input and output work products the people involved the languages used to describe requirements design code and eventually also measures of success or failure The authors have structured the book into three parts Part I deals with all the basic concepts terminology and overall ideas underpinning situational method engineering As a summary of this part they present a formal meta model that enables readers to create their own quality methods and supporting tools In Part II they explain how to implement SME in practice i e how to find method components and put them together and how to evaluate the resulting

method For illustration they also include several industry case studies of customized or constructed processes highlighting the impact that high quality engineered methods can have on the success of an industrial software development Finally Part III summarizes some of the more recent and forward looking ideas This book presents the first summary of the state of the art for SME For academics it provides a comprehensive conceptual framework and discusses new research areas For lecturers thanks to its step by step explanations from basics to the customization and quality assessment of constructed methods it serves as a solid basis for comprehensive courses on the topic For industry methodologists it offers a reference guide on features and technologies to consider when developing in house software development methods or customising and adopting off the shelf ones
