The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-07-21 In the United States broad study in an array of different disciplines arts humanities science mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievements of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos These silos represent

what many see as an artificial separation of academic disciplines This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time The Integration of the Humanities and Arts with Sciences Engineering and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science technology engineering mathematics and medicine STEM lead to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the value of integrating more STEM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEM education programs

Müller's Lab Laura Otis, 2007-04-05 Many structures in the human body are named after Johannes Muller one of the most respected anatomists and physiologists of the 19th century Muller taught many of the leading scientists of his age many of whom would go on to make trail blazing discoveries of their own Among them were Theodor Schwann who demonstrated that all animals are made of cells Hermann Helmholtz who measured the velocity of nerve impulses and Rudolf Virchow who convinced doctors to think of disease at the cellular level This book tells Muller's story by interweaving it with those of seven of his most famous students Muller suffered from depression and insomnia at the same time as he was doing his most important scientific work and may have committed suicide at age 56 Like Muller his most prominent students faced personal and social challenges as they practiced cutting edge science Virchow was fired for his political activism Jakob Henle was jailed for membership in a dueling society and Robert Remak was barred from Prussian universities for refusing to renounce his Orthodox Judaism By recounting these stories Muller's Lab explores the ways in which personal life can affect scientists professional choices and consequently affect the great discoveries they make
