Minimized need for adding chemicals like disinfectants and coagulants to surface water to control pathogens Decreased costs to the community without increased risk to human health But what exactly is RBF In humid regions river water naturally percolates through the ground into aquifers which are layers of sand and gravel that contain water underground during high flow conditions In arid regions most rivers lose flow and the percolating water passes through soil and aquifer material until it reaches the water table During these percolation processes potential contaminants present in river water are filtered and attenuated If there are no other contaminants present in the aquifer or if the respective contaminants are present at lower concentrations the quality of water in the aquifer can be of higher quality than that found in the river In RBF production wells which are placed near the banks of rivers pump large quantities of water

Environmental Geology Workbook Jack W.

Travis, 2019-02-27 Environmental geologists use a wide range of geologic data to solve environmental problems and conflicts Professionals and academics in this field need to know how to gather information on such diverse conditions as soil type rock structure and groundwater flow and then utilize it to understand geological site conditions Field surveys maps well logs bore holes ground penetrating radar aerial photos geologic literature and more help to reveal potential natural hazards in an area or how to remediate contaminated sites This new workbook presents accessible activities designed to highlight key concepts in environmental geology and give students an idea of what they need to know to join the workforce as an environmental geologist engineering geologist geological engineer or geotechnical engineer Exercises cover Preparation data collection and data analysis Descriptive and engineering properties of earth materials Basic tools used in conjunction with geoenvironmental investigations Forces operating on earth materials within the earth Inanimate forces operating on earth materials at the surface of the earth Human activities operating on earth materials Each activity encourages students to think critically and develop deeper knowledge of environmental geology
