Engineering Systems Taoufik Boukharouba, Guy Pluvinaud, Krime Azouaoui, 2016-08-31 This book covers a variety of topics in mechanics with a special emphasis on material mechanics. It reports on fracture mechanics, fatigue of materials, stress-strain behaviours as well as transferability problems and constraint effects in fracture mechanics. It covers different kinds of materials from metallic materials such as ferritic and austenitic steels to composites, concrete, polymers and nanomaterials. Additional topics include heat transfer, quality control and reliability of structures and components. Furthermore, the book gives particular attention to new welding technologies such as STIR welding and spray metal coating and to novel methods for quality control such as Taguchi design, fault diagnosis and wavelet analysis. Based on the 2015 edition of the Algerian Congress of Mechanics, *Congrès Algérien de Mécanique*, CAM, the book also covers energetics in terms of simulation of turbulent reactive flow, behaviour of supersonic jet, turbulent combustion, fire-induced smoke layer and heat and mass transfer as well as important concepts related to human reliability and safety of components and structures. Applied Stress Analysis of Plastics S.I. Krishnamachari, L.J. Broutman, 2013-11-27 This book is a product of the understanding I developed of stress analysis applied to plastics while at work at L.J. Broutman and Associates, UBA and as a lecturer in the seminars on this topic co-sponsored by UBA and Society of Plastics Engineers. I believe that by its extent and level of treatment, this book would serve as an easy-to-read desktop reference for professionals as well as a text book at the junior or senior level in undergraduate programs. The main theme of this book is what to do with computed stress. To approach the theme effectively, I have taken the stress category approach to stress analysis. Such an approach is being successfully used in the nuclear power field. In plastics, this approach helps in the prediction of long-term behavior of structures. To maintain interest, I have limited derivations and proofs to a minimum and provided them if at all as flow charts. In this way, I believe that one can see better the connection between the variables, assumptions and mathematics.
