Discusses instrument development and design. Examines survey design issues including the incorporation of experiments. Discusses case management of automated survey systems. Evaluates training and supervision of computer assisted interviewers. Reviews self administered surveys including optically scannable mail surveys. Considers emerging technologies such as voice recognition, pen CASIC and the Web as a data collection tool. Supplemented with copious tables, figures and references as well as an extensive glossary. Computer Assisted Survey Information Collection provides a solid foundation in CASIC for seasoned research survey practitioners and graduate students across a broad spectrum of social science disciplines.

Biostatistical Methods John M. Lachin, 2014-08-22 Praise for the First Edition: an excellent textbook and indispensable reference for biostatisticians and epidemiologists. International Statistical Institute: A new edition of the definitive guide to classical and modern methods of biostatistics. Biostatistics consists of various quantitative techniques that are essential to the description and evaluation of relationships among biologic and medical phenomena. Biostatistical Methods: The Assessment of Relative Risks, Second Edition, develops basic concepts and derives an expanded array of biostatistical methods through the application of both classical statistical tools and more modern likelihood based theories. With its fluid and balanced presentation, the book guides readers through the important statistical methods for the assessment of absolute and relative risks in epidemiologic studies and clinical trials with categorical count and event time data. Presenting a broad scope of coverage and the latest research on the topic, the author begins with categorical data analysis methods for cross sectional, prospective and retrospective studies of binary, polychotomous and ordinal data. Subsequent chapters present modern model based approaches that include unconditional and conditional logistic regression, Poisson and negative binomial models for count data and the analysis of event time data including the Cox proportional hazards model and its generalizations. The book now includes an introduction to mixed models with fixed and random effects as well as expanded methods for evaluation of sample size and power. Additional new topics featured in this Second Edition include: Establishing equivalence and non inferiority. Methods for the analysis of polychotomous and ordinal data including matched data and the Kappa agreement index. Multinomial logistic for polychotomous data and proportional odds models for ordinal data. Negative binomial models for count data as an alternative to the Poisson model. GEE models for the analysis of longitudinal repeated measures and multivariate observations. Throughout the book SAS is utilized to illustrate applications to numerous real world examples and case studies. A related website features all the data used in examples and problem sets along with the author's SAS routines. Biostatistical Methods, Second Edition is an excellent book for biostatistics courses at the graduate level. It is also an invaluable reference for biostatisticians, applied statisticians and epidemiologists.

Simulation James R. Thompson, 2009-09-25 A unique integrated treatment of computer modeling and simulation The future of science belongs to those willing to make the shift to simulation based modeling predicts Rice Professor James Thompson a leading modeler and computational statistician widely known for his original ideas and engaging style He discusses methods available to anyone with a fast desktop computer for integrating simulation into the modeling process in order to create meaningful models of real phenomena Drawing from a wealth of experience he gives examples from trading markets oncology epidemiology statistical process control physics public policy combat real world optimization Bayesian analyses and population dynamics Dr Thompson believes that so far from liberating us from the necessity of modeling the fast computer enables us to engage in realistic models of processes in for example economics which have not been possible earlier because simple stochastic models in the forward temporal direction generally become quite unmanageably complex when one is looking for such things as likelihoods Thompson shows how simulation may be used to bypass the necessity of obtaining likelihood functions or moment generating functions as a precursor to parameter estimation Simulation A Modeler's Approach is a provocative and practical guide for professionals in applied statistics as well as engineers scientists computer scientists financial analysts and anyone with an interest in the synergy between data models and the digital computer
