Analysis of a Rotatable Wind Turbine Tower by means of Aero-Servo-Elastic Load Simulations Struve, Achim, 2021-04-12

This work highlights how the costs and CO₂ emissions of land based wind turbines can be reduced by means of an innovative and material efficient support structure concept. Thereby the yaw system is placed at the tower base allowing the whole wind turbine tower to be rotated. The potential of a rotatable inclined lattice tower concept was analysed by means of aero servo elastic load simulations in the FAST environment. A balance between different cost aspects revealed significant savings.

Technical Manual United States. War Department, 1960 **Hughes XF-11 Pilot's Flight Operating Instructions**

U.S. Army Air Force, 2008-09-01. The XF 11 was originally conceived as a dedicated reconnaissance aircraft capable of high speed penetration of enemy defenses. The plane's design benefited from research work by its builder, the brilliant and sometimes mercurial Howard Hughes. Inspired by an experimental aircraft he had created known as the DX 2, Hughes XF 11 was a twin engine, twin boom, tricycle gear monoplane that featured a pressurized nacelle for its crew and 28 cylinder engines with contra rotating props. Hughes piloted the XF 11 on its maiden flight and was nearly killed when one of the props reversed pitch and the plane crashed. Hughes recovered and piloted a second prototype, this one outfitted with conventional props, but the Air Force had already made up its mind: the XF 11 would never enter service. Originally printed by Hughes and the Air Force, this handbook provides a fascinating glimpse inside the cockpit of this plane. This manual is declassified.

2015: Which new directions for Alzheimer's disease? Ludovic Martin, 2015-06-03. According to the World Health

Organization, more than 40 million people in the world are affected with dementia. To date, 60-70% of the cases of dementia are attributed to the Alzheimer's disease (AD). This neurodegenerative disorder gradually takes place over a period of at least 20 years before the onset of symptoms, which are impaired memory, apathy, and depression. The characteristics of AD consist in neurofibrillary tangles, intraneuronal aggregates of hyperphosphorylated tau proteins, and senile plaques, dense extraneuronal deposits composed of amyloid A. The other features linked to these two core pathological hallmarks of AD are inflammation, oxidative stress, progressive synaptic and neuronal loss. In past years, some of the emerging therapeutic strategies against AD were employed to deal with the pathological hallmarks of the disease. Science teams all over the world try to restore the tau phosphorylation equilibrium. Their purpose is to interfere with the aggregation of tau and decrease its amount of proteins per se, as well. Furthermore, they are trying either to stimulate the elimination processes of the aggregated tau proteins or to stop the formation of A peptides. This could be reached by the stimulation of the classic techniques of protein degradation, such as the autophagic pathway, or by the targeted immunotherapy. In this Research Topic, we wish to summarize and review the etiology of AD and the related therapeutic opportunities for the next decades. To fully understand the precise mechanisms underlying AD, research findings, reviews, new insights, and new approaches include AD and related tauopathies, tau phosphorylation balance, pharmacological compounds against AD, neuroprotection strategies, and new

therapeutic ways but also risk factors for AD and AD genetic information are included in this issue

Reliability-Based Optimization of Floating Wind Turbine Support Structures Mareike Leimeister, 2023-01-01 This book pursues the ambitious goal of combining floating wind turbine design optimization and reliability assessment which has in fact not been done before The topic is organized into a series of very ambitious objectives which start with an initial state of the art review followed by the development of high fidelity frameworks for a disruptive way to design next generation floating offshore wind turbine FOWT support structures The development of a verified aero hydro servo elastic coupled numerical model of dynamics for FOWTs and a holistic framework for automated simulation and optimization of FOWT systems which is later used for the coupling of design optimization with reliability assessment of FOWT systems in a computationally and time efficient manner has been an aim of many groups internationally towards implementing a performance based goal setting approach in the design of complex engineering systems The outcomes of this work quantify the benefits of an optimal design with a lower mass while fulfilling design constraints Illustrating that comprehensive design methods can be combined with reliability analysis and optimization algorithms towards an integrated reliability based design optimization RBDO can benefit not only the offshore wind energy industry but also other applications such as among others civil infrastructure aerospace and automotive engineering
