Doc-Humanity Maurizio Ferraris,2022-09-12 However you view the present time it is a new century a new world and also a new humanity in fact humanity is not something that was ever defined once and for all but remains an open project For several decades we have been witnessing a revolution However unlike the political and ideological revolutions that took place around the First World War this is a technological and much more radical one that does not depend on people s beliefs but rather on the tireless labour of machines The rise of automation has brought about a revelation of something that had hitherto remained hidden in the workshops of homo faber That is there are very few functions apart from consumption where a machine cannot replace a human being be these material or spiritual machines need energy but they can also do without it whereas humans die if deprived of it or one can imagine a machine producing symphonies but not enjoying them So while human beings are still needed their roles and scopes have to be reconsidered Workers may be superfluous but humans are still needed including those who until recently only recognised themselves as producers The exclusion of workers from production does not discount humans being able to produce value in the form of consumption Recognising this will enable us to conceive the Webfare a new digital system that will teach us to find new names and new forms more tolerance and room for traditional human needs Above all it will teach us how to transform the

time given to us by automation into an opportunity for progress **Dynamics of Galaxies** Giuseppe Bertin, 2000-06-12 Our understanding of galaxies has advanced significantly in recent years New observations from ground and space based telescopes the discovery of dark matter and powerful computer simulations have been instrumental in this This textbook provides graduate students with a complete and thorough introduction to galactic dynamics The first two parts of the book define the astrophysical problems and the methods for building sound physical models Next the observational properties and models of spiral then elliptical galaxies are examined in detail Finally a selection of exciting topics from contemporary research are introduced including the formation and evolution of galaxies cooling flows accretion disks and galaxies at high redshift Throughout the emphasis is on developing a clear understanding and good physical intuition of the processes involved Full derivations are provided for key results and helpful problems are included This textbook provides graduate students with a self contained and accessible introduction to modern galactic dynamics 19th Natural Philosophy Alliance Proceedings Greg Volk, 2012-07-14 The Natural Philosophy Alliance NPA sponsors regular international conferences for presenting high quality papers discussing aspects of philosophy in the sciences Many papers offer challenges to accepted orthodoxy in the sciences especially in physics Everything from the micro physics of quantum mechanics to the macro physics of cosmology is entertained Though the main interest of the NPA is in challenging orthodoxy in the sciences it will also feature papers defending such orthodoxy Our ultimate propose is to enable participants to articulate their own understanding of the truth All papers are reviewed by society officers and sometimes by other members before presentation in conferences and they are edit sometimes very significantly prior to publication in the Proceedings of the NPA **ENC Focus** ,2001 **Mosaic** ,1990
