Do all reactant species participate in a reaction?

Why?

If you were to attend a sporting event on any random weekend you would find there are two types of people in attendance—players and spectators. Although both are important in their own right, they have different functions. This is also the case in chemical reactions. Although a species may be shown in a chemical reaction, it might only be a spectator. In other words it does not actually participate in the breaking and forming of chemical bonds that define the chemical reaction.

Model 1 – Three Reactions

1. Consider the three reactions in Model 1.
 - a. Which beakers in the model contain solid, insoluble substances?
 - b. What evidence is provided in the model to show that these substances are solids?
