Encountering Algebra Cecilia Kilhamn, Roger Säljö, 2019-07-03 The book reports a comparative research project about algebra teaching and learning in four countries. Algebra is a central topic of learning across the world, and it is well known that it represents a hurdle for many students. The book presents analyses built on extensive video recordings of classrooms documenting the first introduction to symbolic algebra, students aged 12 to 14. While the content addressed in all classrooms is variables, expressions, and equations, the teaching approaches are diverse. The chapters bring the reader into different algebra classrooms, discussing issues such as mathematization and social norms, the role of mediating tools, and designed examples and teacher beliefs. By comparing classrooms, new insights are generated about how students understand the algebraic content, how teachers instruct, and how both parties deal with difficulties in learning elementary algebra. The book also describes a research methodology using video in search of taken-for-granted aspects of algebra lessons.

Robitaille,Albert E. Beaton,2005-12-19 Researchers who participate in IEA studies have a unique opportunity to work collaboratively with their counterparts from many different countries and disciplinary backgrounds over a period of several years on questions of shared academic interest Once the data for a given study have been collected and the first round of international reports published however opportunities for that kind of collaboration tend to be much less frequent A major strength of IEA studies compared to other large scale international studies is that they are classroom based thereby making it possible for researchers and policy makers to investigate linkages between students achievement and a wide range of variables Those variables could be related to instructional practices to students and teachers background and attitudes to school organizational patterns or to opportunity to learn to name a few The research questions that TIMSS was designed to address make it clear that these kinds of relational multi variate analyses were among the major goals of the project The

international reports of the TIMSS 95 results that were published by the International Study Center at Boston College between 1996 and 1999 were intended to provide comprehensive coverage of the basic findings of the study. They were not intended to provide in-depth analyses of research and policy issues; instead, their main purpose was to make the basic findings of the study widely available in a timely manner. This they certainly did.
