

The Digestive System

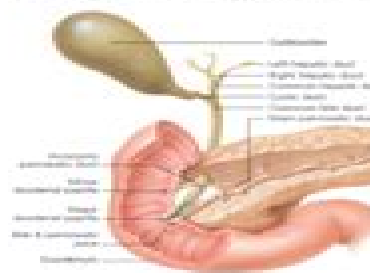

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

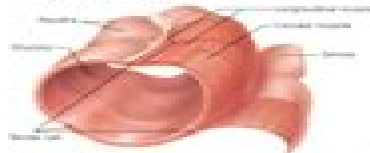

Liver, pancreas & gallbladder

After leaving the stomach, digested material enters the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **gallbladder**. This bile is a strong agent on the material within the duodenum, causing it to move forward. The **pancreas**, an organ in the abdominal cavity, secretes enzymes that help in the digestion of food. The **liver**, a large organ in the abdominal cavity, produces bile, which is stored in the **gallbladder**.

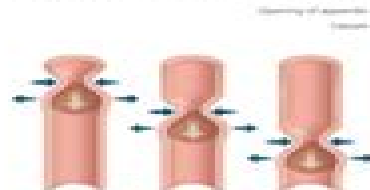

Layers of large intestine

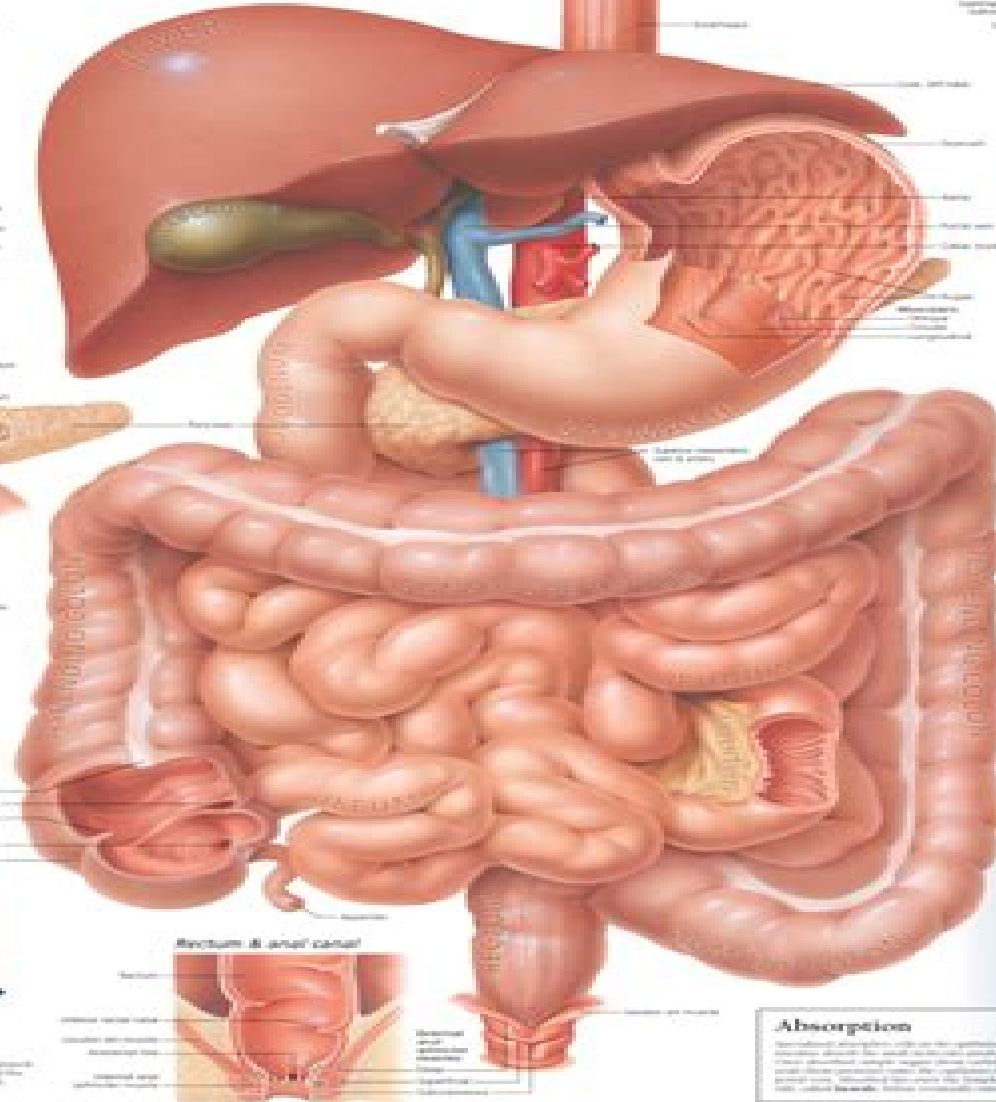

Large intestine

The large intestine consists of the cecum, the appendix, the ascending colon, the transverse colon, the descending colon, the sigmoid colon, and the rectum. The large intestine is responsible for absorbing water and electrolytes from the undigested material, forming feces.

Peristaltic action

Food material is pushed through the digestive system by a series of powerful muscular contractions called peristalsis. These contractions move the material forward and the food is then, when the stomach has relaxed.

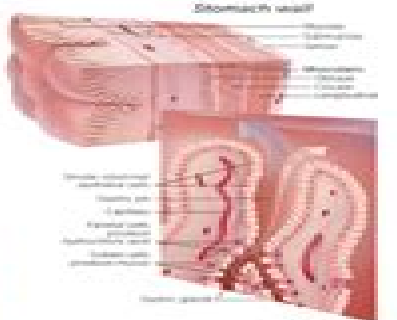

The mouth & salivary glands

Chewing the food breaks it into small pieces, making it easier to swallow. Saliva, secreted by the salivary glands, moistens the food and helps in the digestion of carbohydrates. The salivary glands are located in the mouth and are responsible for the production of saliva.

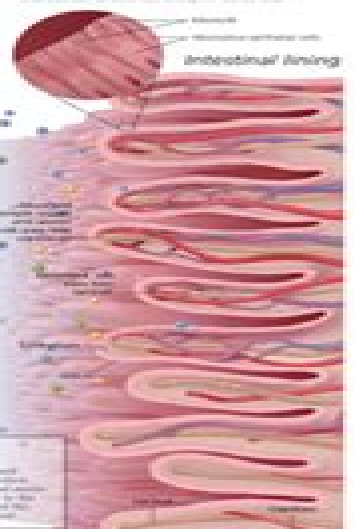

The stomach

The stomach is a large, muscular organ that is responsible for the digestion of food. It is located in the upper abdominal cavity. The stomach wall is composed of several layers, including the mucosa, submucosa, muscularis, and serosa.

Small intestine

The small intestine is a long, coiled organ that is responsible for the digestion of food. It is located in the abdominal cavity. The small intestine is divided into three parts: the duodenum, the jejunum, and the ileum.

Absorption

The process of absorption involves the movement of nutrients from the small intestine into the bloodstream. This process occurs in the villi, which are small, finger-like projections that line the inner surface of the small intestine.
