

ANGLE RELATIONSHIPS IN CIRCLES

Name _____

Inscribed Angle

$\angle ABC$ is inscribed in circle O.
The vertex of the angle is on the perimeter of the circle.
 AC is the intercepted arc.
The measure of the inscribed angle is $\frac{1}{2}$ the measure of the intercepted arc.

Central Angle

$\angle AOB$ is a central angle and its vertex is O.
The vertex is located at the center of the circle.
 AB is a minor arc - the points are on the circumference of the circle.
 AOB is a major arc - the points are outside of the central angle.
The measure of the central angle is equal to the measure of the minor arc.

If a line is tangent to a circle, then it is perpendicular to the radius drawn to the point of tangency.
Point A is the point of tangency.

$$\begin{aligned} m\angle 1 + m\angle 3 &= 180^\circ \\ m\angle 2 + m\angle 4 &= 180^\circ \end{aligned}$$

If a quadrilateral is inscribed in a circle, then each vertex is located on the perimeter of the circle, then opposite angles are supplementary (sum to 180 degrees).

Two inscribed angles that intercept the same arc are congruent.

Special Inscribed Angles

An angle inscribed in a semicircle is a right angle.

$$m\angle ABC = \frac{1}{2} m\widehat{AC}$$

The measure of an angle formed by a chord and a tangent that intersects a circle is half the measure of the intercepted arc.
