A framed picture 24 inches wide and 28 inches high is shown in the diagram below. The picture will be hung on a wall where the distance from the floor to ceiling is 8 feet. The center of the picture must be $5\frac{1}{4}$ feet from the floor. Determine the distance from the ceiling to the top of the picture frame.

$$8\text{ ft} \times 12 = 96\text{ in}$$
$$5\frac{1}{4}\text{ ft} \times 12 = 63\text{ in}$$

$$63 + 14 + x = 96$$

$$\begin{array}{r} \checkmark \\ \cancel{63} + x = 96 \\ \cancel{-63} \end{array}$$

$$x = 19\text{ in}$$

through Example-Based Problem Solving Meixia Ding, 2021-04-07. Drawing on rich classroom observations of educators teaching in China and the U.S., this book details an innovative and effective approach to teaching algebra at the elementary level, namely teaching through example-based problem solving (TEPS). Recognizing young children's particular cognitive and developmental capabilities, this book powerfully argues for the importance of infusing algebraic thinking into early grade mathematics teaching and illustrates how this has been achieved by teachers in U.S. and Chinese contexts. Documenting best practice and students' responses to example-based instruction, the text demonstrates that this TEPS approach, which involves the use of worked examples, representations, and deep questions, helps students learn and master fundamental mathematical ideas, making it highly effective in developing algebraic readiness and mathematical understanding. This text will benefit post-graduate students, researchers, and academics in the fields of mathematics, STEM, and elementary education, as well as algebra research more broadly. Those interested in teacher education, classroom practice, and developmental and cognitive psychology will also find this volume of interest. **Effective Math Instruction** Jared Dupree, 2016-02-01.
