## Unit Two: Seeing Structure in Expressions

### Interpret the structure of expressions

|           |                                                                                                                                                                                                                            |  |  |  |  |  |  |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|
| 5SE.A.1   | Interpret expressions that represent a quantity in terms of its context.                                                                                                                                                   |  |  |  |  |  |  |
| 5SE.A.1.a | Interpret parts of an expression, such as terms, factors, and coefficients.                                                                                                                                                |  |  |  |  |  |  |
| 5SE.A.1.b | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+r)^n$ as the product of $P$ and a factor not depending on $P$ .                                    |  |  |  |  |  |  |
| 5SE.A.2   | Use the structure of an expression to identify ways to rewrite it. For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$ , thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$ . |  |  |  |  |  |  |

### Write expressions in equivalent forms to solve problems

|           |                                                                                                                                                                                                                                                                      |  |  |  |  |  |  |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|
| 5SE.B.3   | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.                                                                                                                               |  |  |  |  |  |  |
| 5SE.B.3.a | Factor a quadratic expression to reveal the zeros of the function it defines.                                                                                                                                                                                        |  |  |  |  |  |  |
| 5SE.B.3.b | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.                                                                                                                                                     |  |  |  |  |  |  |
| 5SE.B.3.c | Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15t$ can be rewritten as $(1.15^{1/12})^{12t} = 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%. |  |  |  |  |  |  |
