

ALGORITHM & FLOWCHART MANUAL for STUDENTS

Part (1)

Algorithm in Programming:

In programming, algorithm is a set of well-defined instructions in sequence to solve the problem.

HOW TO WRITE ALGORITHMS:

Step 1 Define your algorithms input: Many algorithms take in data to be processed, e.g. to calculate the area of rectangle input may be the rectangle height and rectangle width.

Step 2 Define the variables: Algorithm's variables allow you to use it for more than one place. We can define two variables for rectangle height and rectangle width as HEIGHT and WIDTH (or H & W). We should use meaningful variable name e.g. instead of using H & W use HEIGHT and WIDTH as variable name.

Step 3 Outline the algorithm's operations: Use input variable for computation purpose, e.g. to find area of rectangle multiply the HEIGHT and WIDTH variable and store the value in new variable (say) AREA. An algorithm's operations can take the form of multiple steps and even branch, depending on the value of the input variables.

Step 4 Output the results of your algorithm's operations: In case of area of rectangle output will be the value stored in variable AREA, if the input variables described a rectangle with a HEIGHT of 2 and a WIDTH of 3, the algorithm would output the value of 6.

Flowchart:

Flowchart is diagrammatic /Graphical representation of sequence of steps to solve a problem. To draw a flowchart following standard symbols are use

Symbol	Purpose	Description
	Flow line	Used to indicate the flow of logic by connecting symbols.

Algorithm Engineering Stefan Näher, Dorothea Wagner, 2007-06-03 This volume contains the papers accepted for the 4th Workshop on Algorithm Engineering WAE 2000 held in Saarbrücken Germany during 5-8 September 2000 together with the abstract of the invited lecture given by Karsten Weihe. The Workshop on Algorithm Engineering covers research on all aspects of the subject. The goal is to present recent research results and to identify and explore directions for future research. Previous meetings were held in Venice 1997, Saarbrücken 1998 and London 1999. Papers were solicited describing original research in all aspects of algorithm engineering including: Development of software repositories and platforms which allow the use of and experimentation with efficient discrete algorithms; Novel uses of discrete algorithms in other disciplines and the evaluation of algorithms for realistic environments; Methodological issues including standards in the context of empirical search on algorithms and data structures; Methodological issues regarding the process of converting user requirements into efficient algorithmic solutions and implementations. The program committee accepted 16 from a total of 30 submissions. The program committee meeting was conducted electronically. The criteria for selection were originality, quality and relevance to the subject area of the workshop. Considerable effort was devoted to the evaluation of the submissions and to providing the authors with feedback. Each submission was reviewed by at least four program committee members assisted by subreferees. A special issue of the ACM Journal of Experimental Algorithmics will be devoted to selected papers from WAE 2000.

Practice and Theory of Automated Timetabling III Edmund Burke, Wilhelm Erben, 2003-06-29 This volume is the third in an ongoing series of books that deal with the state of the art in timetabling research. It contains a selection of the papers presented at the 3rd International Conference on the Practice and Theory of Automated Timetabling PATAT 2000 held in Constance, Germany, on August 16-18th 2000. The conference once again brought together researchers, practitioners and vendors from all over the world working on all aspects of computer-aided timetable generation. The main aim of the PATAT conference series is to serve as an international and interdisciplinary forum for new timetabling research results and directions. The conference series particularly aims to foster multidisciplinary timetabling research. Our field has always attracted scientists from a number of traditional domains including computer science and operational research and we believe that the cross-fertilisation of ideas from different fields and disciplines is a very important factor in the future development of timetabling research. The Constance conference certainly met these aims. As can be seen from the selection of papers in this volume, there was a wide range of interesting approaches and ideas for a variety of timetabling application areas and there were delegates from many different disciplines. It is clear that while considerable progress is being made in many areas of timetabling research, there are a number of important issues that researchers still have to face. In a contribution to the previous PATAT conference, George M. VLSI Physical Design Automation Sadiq M. Sait, Habib Youssef, 1999 VLSI Physical Design Automation Theory and Practice is an essential introduction for senior undergraduates, postgraduates and anyone

starting work in the field of CAD for VLSI It covers all aspects of physical design together with such related areas as automatic cell generation silicon compilation layout editors and compaction A problem solving approach is adopted and each solution is illustrated with examples Each topic is treated in a standard format Problem Definition Cost Functions and Constraints Possible Approaches and Latest Developments BOOK JACKET
