

Skin and Body Membranes

Key

Body membranes, which cover body surfaces, line its cavities, and form protective sheets around organs, fall into two major categories. These are epithelial membranes (skin epidermis, mucosae, and serosae) and the connective tissue synovial membranes.

Topics for review in this chapter include a comparison of structure and function of various membranes, anatomical characteristics of the skin (composed of the connective tissue dermis and the epidermis) and its derivatives, and the manner in which the skin responds to both internal and external stimuli to protect the body.

CLASSIFICATION OF BODY MEMBRANES

1. Complete the following table relating to body membranes. Enter your responses in the areas left blank.

Membrane	Tissue type (epithelial/connective)	Common locations	Functions
Mucous	connective	Cavities opening to outside world	Protection
Serous	connective	Cavities not open to outside world	anchoring organs- providing ability to move side past each other
Cutaneous	epithelial	skin	Protection from outside world
Synovial	connective	Joints	Produce synovial fluid- lubricate joints
