## section 1 Complex Patterns of Inheritance

### Before You Read

Cats can look different from one another because of differences in their coats. On the lines below, describe differences you have seen in the coats of cats. Then read the section to learn more about complex inheritance patterns.

---

---

#### MAIN Idea

Complex inheritance of traits does not follow the inheritance patterns described by Mendel.

#### What You'll Learn

- the difference between sex-linked and sex-limited inheritance
- how environment can influence a trait

### Read to Learn

#### Incomplete Dominance

Not all traits follow Mendel's rules. Some traits are not dominant or recessive. Sometimes, the heterozygous organism has a mixed phenotype. **Incomplete dominance** occurs when the heterozygous phenotype is an intermediate phenotype between the two homozygous phenotypes.

An example of incomplete dominance occurs in snapdragon flowers. Red-flowered snapdragons ( $C^R C^R$ ) can be crossed with white-flowered snapdragons ( $C^W C^W$ ) to produce offspring with pink flowers ( $C^R C^W$ ). When heterozygous  $F_1$  generation snapdragon plants ( $C^R C^W$ ) self-fertilize, the offspring have a 1:2:1 ratio of red, pink, and white flowers.

#### Codominance

In Mendel's experiments with pea plants, heterozygous pea plants expressed only the dominant allele. **Codominance** occurs when a heterozygous organism expresses both alleles. Sickle-cell anemia is an example of codominance. People who are heterozygous for the sickle-cell trait have both normal and sickle-shaped cells.

Schneider, 2024-11-29 This monograph presents a detailed analysis of the beginning and rapid establishment of blood group research in the first half of the twentieth century The main theme of this book is how blood groups were used as a scientific explanation of differences in race health and human behaviour The discovery of the inheritance of blood groups and their uneven distribution among various human populations quickly developed into a new field of scientific study in various countries around the world Almost as quickly the discoveries were studied as genetic markers of race disease and behaviours such as crime insanity and temperament The time scope of coverage is the first half of the twentieth century beginning with Landsteiner s discovery of blood groups and ending with the period following the Second World War when the research was picked up again and became part of the revolution in human genetics accelerated by the discovery of the double helix By this time blood group genetics had undermined the very concept of race and became the foundation of population genetics The focus on the formative period of blood group research complements the recent resurgence of interest in the subject by providing in depth background and a base for further research      Human Heredity Michael R.
