Handbook on Information Technologies for Education and Training Heimo H. Adelsberger, Jan M. Pawlowski, 2002

Information Technologies for Education and Training have gained increasing attention and significance in the past decade. Accordingly the availability of an enormous amount of information sources through the Internet, the technological progress in the ICT sector and an increasing flexibility in organizations and enterprises have accelerated the information and knowledge growth in our society. Knowledge and Lifelong Learning have become critical success factors for the long term positioning on the global market. Recent mergers of globally distributed enterprises show that knowledge has to be available and transferable within a short time frame. Global flexible and service oriented organizations need highly qualified employees. These trends also show the rapidly growing significance of new aspects of basic and further education. Traditional education ending with a graduation will be complemented by a lifelong learning process. Every individual is required to continuously learn new and changing knowledge. Consequently the support of learning processes through innovative technologies becomes an elementary component of every educational level. The Handbook is a comprehensive guide for researchers and practitioners working with Educational Technologies. Its overall goal is to enable the reader to gain a deep understanding of past, current and future research and applications in the field of Educational Technologies. It will provide a reference source for both practitioners and researchers in the enterprise and educational sector. From a research perspective the reader will gain an in depth understanding of complex theories, strategies, concepts and methods of Educational Technologies.
