14th International Conference on Turbochargers and Turbocharging Institution of Mechanical Engineers, 2020-09-30

14th International Conference on Turbochargers and Turbocharging addresses current and novel turbocharging system choices and components with a renewed emphasis to address the challenges posed by emission regulations and market trends. The contributions focus on the development of air management solutions and waste heat recovery ideas to support thermal propulsion systems leading to high thermal efficiency and low exhaust emissions. These can be in the form of internal combustion engines or other propulsion technologies eg Fuel cell in both direct drive and hybridised configuration. 14th International Conference on Turbochargers and Turbocharging also provides a particular focus on turbochargers superchargers waste heat recovery turbines and related air managements components in both electrical and mechanical forms.

Advances in Fluid Mechanics IX Matur Rahman, C. A. Brebbia, 2012. This book discusses the basic formulations of fluid mechanics and their computer modelling as well as the relationship between experimental and analytical results. Containing papers from the Ninth International Conference on Advances in Fluid Mechanics, this book discusses the basic formulations of fluid mechanics and their computer modelling as well as the relationship between experimental and analytical results. Scientists, engineers and other professionals interested in the latest developments in theoretical and computational fluid mechanics will find the book a useful addition to the literature. The book covers a wide range of topics with emphasis on new applications and research currently in progress including Computational Methods in Fluid Mechanics, Environmental Fluid Mechanics, Experimental Versus Simulation Methods, Multiphase Flow, Hydraulics and Hydrodynamics, Heat and Mass Transfer, Industrial Applications, Wave Studies, Biofluids, Fluid Structure Interaction. Modeling and Control of Autonomous Systems Mahmut Reyhanoglu, 2025-09-03. Significant advances have been made in the development of sensing and control algorithms to tackle challenges related to autonomous systems. This book is intended to provide a succinct overview of recent progress in autonomous sea, land and air vehicles. It brings together important contributions from renowned international researchers to provide an excellent survey of new perspectives and paradigms of autonomous systems. Computational Methods in Multiphase Flow V Andrea Alberto Mammoli, C. A. Brebbia, 2009. Together with turbulence, multiphase flow remains one of the most challenging areas of computational mechanics and experimental methods and numerous problems remain unsolved to date. Multiphase flows are found in all areas of technology at all length scales and flow regimes. The fluids involved can be compressible or incompressible, linear or nonlinear. Because of the complexity of the problems, it is often essential to utilize advanced computational and experimental methods to solve the complex equations that describe them. Challenges in these simulations include modelling and tracking interfaces, dealing with multiple length scales, modelling nonlinear fluids, treating drop breakup and coalescence, characterizing phase structures and many others. Experimental techniques, although expensive and difficult to perform, are essential to validate models. This book

contains papers presented at the Fifth International Conference on Computational Methods in Multiphase Flow which are grouped into the following topics Multiphase Flow Simulation Interaction of Gas Liquids and Solids Turbulent Flow Environmental Multiphase Flow Bubble and Drop Dynamics Flow in Porous Media Heat Transfer Image Processing Interfacial Behaviour
