Ansys Cfx User Guide:

Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment Umer Afzal, 2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts

Automotive Painting Technology Kimio

Toda,Abraham Salazar,Kozo Saito,2012-12-21 This book offers unique and valuable contributions to the field It offers breadth and inclusiveness Most existing works on automotive painting cover only a single aspect of this complex topic such as the chemistry of paint or paint booth technology Monozukuri and Hitozukuri are Japanese terms that can be translated as making things and developing people but their implications in Japanese are richer and more complex than this minimal translation would indicate The Monozukuri Hitozukuri perspective is drawn from essential principles on which the Toyota approach to problem solving and continuous improvement is based From this perspective neither painting technology R D nor painting technology use in manufacturing can be done successfully without integrating technological and human concerns involved with making and learning in the broadest sense as the hyphen is meant to indicate The editors provide case studies and examples drawn from Mr Toda s 33 years of experience with automotive painting at Toyota and from Dr Saito s 18 years experience with IR4TD the research for development group he leads at the University of Kentucky that give details on how these two principles can be integrated for successful problem solving and innovation in industry in university R D and in the collaboration between the two The book will bring readers up to date on progress in the field over the last decade to provide a basis for and to indicate fruitful directions in future R D and technology innovation for automotive painting
