Zhang,Zhangxin Chen,Craig C. Douglas,Wei Qin Tong,2010-02-19 This book constitutes the thoroughly refereed post conference proceedings of the Second International Conference on High Performance Computing and Applications HPCA 2009 held in Shanghai China in August 2009 The 71 revised papers presented together with 10 invited presentations were carefully selected from 324 submissions The papers cover topics such as numerical algorithms and solutions high performance and grid computing novel approaches to high performance computing massive data storage and processing and hardware acceleration Mathematical Modelling of Energy Systems and Fluid Machinery Mirko Morini,Michele Pinelli,2021-06-04

The ongoing digitalization of the energy sector which will make a large amount of data available should not be viewed as a passive ICT application for energy technology or a threat to thermodynamics and fluid dynamics in the light of the competition triggered by data mining and machine learning techniques These new technologies must be posed on solid bases for the representation of energy systems and fluid machinery Therefore mathematical modelling is still relevant and its importance cannot be underestimated The aim of this Special Issue was to collect contributions about mathematical modelling of energy systems and fluid machinery in order to build and consolidate the base of this knowledge **Advances in Hydroinformatics**

Philippe Gourbesville,Jean Cunge,Guy Caignaert,2018-02-26 This book gathers a collection of extended papers based on presentations given during the SimHydro 2017 conference held in Sophia Antipolis Nice France on June 14 16 2017 It focuses on how to choose the right model in applied hydraulics and considers various aspects including the modeling and simulation of fast hydraulic transients 3D modeling uncertainties and multiphase flows The book explores both limitations and performance of current models and presents the latest developments in new numerical schemes high performance computing multiphysics and multiscale methods and better interaction with field or scale model data It gathers the latest theoretical and innovative developments in the modeling field and presents some of the most advanced applications on various water related topics like uncertainties flood simulation and complex hydraulic applications Given its breadth of coverage it addresses the needs and interests of practitioners stakeholders researchers and engineers alike **Recent**

Developments in Wind Engineering Vinayagamurthy G,Parammasivam K M,Selvirajan,Abhay Gupta,Shuyang Cao,2025-07-21 This book presents the select proceedings of the 10th National Conference on Wind Engineering NCWE 2024 It broadly explores five major areas of research The testing methodologies section focuses particularly on the recent developments in wind tunnel testing computational wind engineering and field measurements It also delves into wind loading on structures encompassing bridges facades chimneys cooling towers steel towers and low rise and high rise structures The book also addresses revisions to the Indian Standard IS Codes The book has a dedicated chapter on measurements and assessments related to wind meteorology wind climate assessment urban wind environment and disaster mitigation It especially presents the recent advances in utilising Artificial intelligence AI and Machine Learning ML for predictions This book also covers other important topics like wind induced vibrations and control specifically within aerodynamics and

aeroelasticity It also covers topics like wind turbines and other industrial aerodynamics including vehicle and sports aerodynamics

Thermofluid Dynamics of Turbulent Flows Michele Ciofalo, 2021-08-16 The book provides the theoretical fundamentals on turbulence and a complete overview of turbulence models from the simplest to the most advanced ones including Direct and Large Eddy Simulation It mainly focuses on problems of modeling and computation and provides information regarding the theory of dynamical systems and their bifurcations It also examines turbulence aspects which are not treated in most existing books on this subject such as turbulence in free and mixed convection transient turbulence and transition to turbulence The book adopts the tensor notation which is the most appropriate to deal with intrinsically tensor quantities such as stresses and strain rates and for those who are not familiar with it an Appendix on tensor algebra and tensor notation are provided

Computational Fluid Dynamics Simulations Guozhao Ji, Jiujiang Zhu, 2020 Fluid flows are encountered in our daily life as well as in engineering industries Identifying the temporal and spatial distribution of fluid dynamic properties is essential in analyzing the processes related to flows These properties such as velocity turbulence temperature pressure and concentration play important roles in mass transfer heat transfer reaction rate and force analysis However obtaining the analytical solution of these fluid property distributions is technically difficult or impossible With the technique of finite difference methods or finite element methods attaining numerical solutions from the partial differential equations of mass momentum and energy have become achievable Therefore computational fluid dynamics CFD has emerged and been widely applied in various fields This book collects the recent studies that have applied the CFD technique in analyzing several representative processes covering mechanical engineering chemical engineering environmental engineering and thermal engineering
