here we will bring a first complete and comprehensive treatise on the latest progress in innovative technologies with a clear demonstration of the applicability of particular methods based on results of the authors from pilot tests i.e. based on the data collected within several applied projects mainly national project Environmentally friendly nanotechnologies and biotechnologies in water and soil treatment of the Technology Agency of the Czech Republic and 7FP project NANOREM Taking Nanotechnological Remediation Processes from Lab Scale to End User Applications for the Restoration of a Clean Environment This multidisciplinary book will be suitable for a broad audience including environmental scientists practitioners policymakers and toxicologists and of course graduate students of diverse fields material science chemistry biology geology hydrogeology engineering etc

Mutation research Charlotte Auerbach, 2013-11-11 This book is intended for the senior undergraduate Honours student in genetics and for the postgraduate who wants a survey of the whole field or information on a special area within it In order to cater for readers with such different requirements I have made the list of references unusually large for a textbook It includes classical papers as well as very recent ones to the end of 1974 reviews as well as specialized articles elementary expositions from Scientific American as well as highly technical papers from journals on genetics and molecular biology In areas of active research I have given preference to the latest references which will lead the reader to earlier ones In addition to the references at the end of each chapter a bibliography at the end of the book lists relevant books and general reviews Apart from the first chapter the book is not written as a history of mutation research but throughout I have tried to emphasize the continuity of the problems concepts and ideas The reader will find many examples of this Muller's once famous and then almost forgotten classification of genes by their action has now been given biochemical reality by studies of gene action in vitro The problem of whether mutations can arise in non replicating genomes is one of the oldest in mutation research yet an unequivocal solution was obtained only recently with bacteriophage
