

CHAPTER 1: EXPLORING LIFE

KEY CONCEPTS

- 1.1 Biologists explore life from the microscopic to the global scale.
- 1.2 Biological systems are much more than the sum of its parts.
- 1.3 Biologists explore life across its great diversity of species.
- 1.4 Evolution accounts for life's unity and diversity.
- 1.5 Biologists use various forms of inquiry to explore life.
- 1.6 A set of themes connects the concepts of biology.

INTERACTIVE QUESTIONS

- 1.1 Write a brief description of each of these levels of biological organization.
 - a. biosphere – the overall Earth and its ecosystem
 - b. ecosystem – living and nonliving aspects
 - c. community – all organisms living in a general area
 - d. population – all individuals of a single species
 - e. organism – an individual living entity
 - f. organs and organ systems – compound of many tissues for a common function
 - g. tissues – collection of cells
 - h. cells – fundamental unit of life
 - i. organelles – functional components that make up a cell
 - j. molecules – compound of atoms held together by bonds

- 1.2 How do DNA nucleotides relate to proteins?

The order of nucleotides in a DNA molecule that make up a gene “spells” the instructions for making a protein with a specific shape and function.

- 1.3 What types of diverse specialists might be involved in a systems biology team?

a. biologists from all fields, engineers, medical scientists, physicists, chemists, mathematicians, and computer scientists.

Give examples of how systems biology may impact medical practice or environmental policy making.

b. in predicting how a particular drug or treatment may affect various aspects of the body; in predicting effects on various parts of the ecosystem as CO₂ concentration climbs.

- 1.4 What are the main criteria for separating plants, fungi, and animals into kingdoms?

They are characterized to a large extent by a large extent by their mode of nutrition.

Plants are photosynthetic, fungi absorb their nutrients from decomposing organic material, and animals ingest other organisms.

- 1.5 Describe in your own words Darwin's theory of natural selection as the mechanism of evolution.

Most species tend to produce more offspring than can survive. Organisms with heritable traits best suited to the environment will tend to reproduce more successfully and leave much more offspring. Over time, favorable adaptations will accumulate in a population.

Programming Michael Kifer,Yanhong Annie Liu,2018-09-19 The idea of this book grew out of a symposium that was held at Stony Brook in September 2012 in celebration of David S Warren s fundamental contributions to Computer Science and the area of Logic Programming in particular Logic Programming LP is at the nexus of Knowledge Representation Artificial Intelligence Mathematical Logic Databases and Programming Languages It is fascinating and intellectually stimulating due to the fundamental interplay among theory systems and applications brought about by logic Logic programs are more declarative in the sense that they strive to be logical specifications of what to do rather than how to do it and thus they are high level and easier to understand and maintain Yet without being given an actual algorithm LP systems implement the logical specifications automatically Several books cover the basics of LP but focus mostly on the Prolog language with its

incomplete control strategy and non logical features At the same time there is generally a lack of accessible yet comprehensive collections of articles covering the key aspects in declarative LP These aspects include among others well founded vs stable model semantics for negation constraints object oriented LP updates probabilistic LP and evaluation methods including top down vs bottom up and tabling For systems the situation is even less satisfactory lacking accessible literature that can help train the new crop of developers practitioners and researchers There are a few guides on Warren s Abstract Machine WAM which underlies most implementations of Prolog but very little exists on what is needed for constructing a state of the art declarative LP inference engine Contrast this with the literature on say Compilers where one can first study a book on the general principles and algorithms and then dive in the particulars of a specific compiler Such resources greatly facilitate the ability to start making meaningful contributions quickly There is also a dearth of articles about systems that support truly declarative languages especially those that tie into first order logic mathematical programming and constraint solving LP helps solve challenging problems in a wide range of application areas but in depth analysis of their connection with LP language abstractions and LP implementation methods is lacking Also rare are surveys of challenging application areas of LP such as Bioinformatics Natural Language Processing Verification and Planning The goal of this book is to help fill in the previously mentioned void in the LP literature It offers a number of overviews on key aspects of LP that are suitable for researchers and practitioners as well as graduate students The following chapters in theory systems and applications of LP are included

Biology Gilbert D. Brum, Larry McKane, Gerald Karp, 1993-10-29 This lively richly illustrated text makes biology relevant and appealing revealing it as a dynamic process of exploration and discovery Portrays biologists as they really are human beings with motivations misfortunes and mishaps much like everyone has Encourages students to think critically solve problems apply biological principles to everyday life
