Scientific Computing and Algorithms in Industrial Simulations Michael Griebel, Anton Schüller, Marc Alexander Schweitzer, 2017-10-30 The contributions gathered here provide an overview of current research projects and selected software products of the Fraunhofer Institute for Algorithms and Scientific Computing SCAI. They show the wide range of challenges that scientific computing currently faces, the solutions it offers, and its important role in developing applications for industry. Given the exciting field of applied collaborative research and development, it discusses the book will appeal to scientists, practitioners, and students alike. The Fraunhofer Institute for Algorithms and Scientific Computing SCAI combines excellent research and application-oriented development to provide added value for our partners. SCAI develops numerical techniques, parallel algorithms, and specialized software tools to support and optimize industrial simulations. Moreover, it implements custom software solutions for production and logistics and offers calculations on high performance computers. Its services and products are based on state-of-the-art methods from applied mathematics and information technology.

IUTAM Symposium on Solver-Coupling and Co-Simulation Bernhard Schweizer, 2019-05-14 This is the Proceedings of the IUTAM Symposium on Solver Coupling and Co Simulation that was held in Darmstadt, Germany, September 18-20, 2017. The symposium focused on recent advances in the development of numerical methods for solver coupling, like new explicit, implicit, and semi-implicit co-simulation methods, new approaches for realizing variable communication time grids, and advances in the stability and convergence analysis of solver coupling methods. Recent developments in the practical application of co-simulation methods, for instance, new fields of application for solver coupling, approaches, new developments in the parallelization of dynamic models with co-simulation techniques, and standardization of co-simulation interfaces, i.e., standardization of data and model exchange, were also discussed. The book brings together the research results of leading scientists in applied mathematics, mechanics, and engineering science, thus contributing to further develop numerical methods for coupled simulations. 2014 International Conference on Advanced Education and Management (ICAEM2014)

, 2014-02-13 The ICAEM2014 aims to bring together researchers, educators, and students from around the world in both industry and academia for sharing the state-of-the-art research results and applications for exploring new areas of research and development and for discussing emerging issues on education and management fields. We received a total of 312 submissions from various parts of the world. The Technical Program Committee worked very hard to have all papers reviewed before the review deadline. The final technical program consists of 92 papers. There are one keynote speech and 2 invited sessions. The proceedings were published by DEStech Publications, Inc. and will be submitted to Ei Compindex databases for indexing. We would like to mention that due to the limitation of the conference venue capacity, we are not able to include many fine papers in the technical program. Our apology goes to those authors. Using Games and Simulations for Teaching and Assessment Harold F. O'Neil, Eva L. Baker, Ray S. Perez, 2016-03-31 Using Games and Simulations for Teaching and Assessment Key

Issues comprises a multidisciplinary investigation into the issues that arise when using games and simulations for educational purposes Using both theoretical and empirical analyses this collection examines cognitive motivational and psychometric issues with a focus on STEM content Unlike other research based volumes that focus solely on game design or the theoretical basis behind gaming this book unites previously disparate communities of researchers from civilian to military contexts as well as multiple disciplines to critically explore current problems and illustrate how instructionally effective games and simulations should be planned and evaluated While computer based simulations and games have the potential to improve the quality of education and training Using Games and Simulations for Teaching and Assessment Key Issues shows how the science of learning should underlie the use of such technologies Through a wide ranging yet detailed examination chapter authors provide suggestions for designing and developing games simulations and intelligent tutoring systems that are scientifically based outcomes driven and cost conscious

Differential and Differential-Algebraic Systems for the Chemical Engineer Guido Buzzì-Ferraris, Flavio Manenti, 2015-01-12 Engineers and other applied scientists are frequently faced with models of complex systems for which no rigorous mathematical solution can be calculated To predict and calculate the behaviour of such systems numerical approximations are frequently used either based on measurements of real life systems or on the behaviour of simpler models This is essential work for example for the process engineer implementing simulation control and optimization of chemical processes for design and operational purposes This fourth in a suite of five practical guides is an engineer's companion to using numerical methods for the solution of complex mathematical problems It explains the theory behind current numerical methods and shows in a step by step fashion how to use them The volume focuses on differential and differential algebraic systems providing numerous real life industrial case studies to illustrate this complex topic It describes the methods innovative techniques and strategies that are all implemented in a freely available toolbox called BzzMath which is developed and maintained by the authors and provides up to date software tools for all the methods described in the book Numerous examples sample codes programs and applications are taken from a wide range of scientific and engineering fields such as chemical engineering electrical engineering physics medicine and environmental science As a result engineers and scientists learn how to optimize processes even before entering the laboratory With additional online material including the latest version of BzzMath Library installation tutorial all examples and sample codes used in the book and a host of further examples

Numerical Algebra, Matrix Theory, Differential-Algebraic Equations and Control Theory Peter Benner, Matthias Bollhöfer, Daniel Kressner, Christian Mehl, Tatjana Stykel, 2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra matrix theory differential algebraic equations and control theory These mathematical research areas are strongly related and often occur in the same real world applications The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics This book also reflects some of Volker

Mehrmann's major career stages Starting out working in the areas of numerical linear algebra his first full professorship at TU Chemnitz was in Numerical Algebra hence the title of the book and matrix theory Volker Mehrmann has made significant contributions to these areas ever since The highlights of these are discussed in Parts I and II of the present book Often the development of new algorithms in numerical linear algebra is motivated by problems in system and control theory These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III Besides providing a scientific discussion of Volker Mehrmann's work and its impact on the development of several areas of applied mathematics the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra matrix theory differential algebraic equations and control theory

Applications of Differential-Algebraic Equations: Examples and Benchmarks Stephen

Campbell, Achim Ilchmann, Volker Mehrmann, Timo Reis, 2019-06-08 This volume encompasses prototypical innovative and emerging examples and benchmarks of Differential Algebraic Equations DAEs and their applications such as electrical networks chemical reactors multibody systems and multiphysics models to name but a few Each article begins with an exposition of modelling explaining whether the model is prototypical and for which applications it is used This is followed by a mathematical analysis and if appropriate a discussion of the numerical aspects including simulation Additionally benchmark examples are included throughout the text Mathematicians engineers and other scientists working in both academia and industry either on differential algebraic equations and systems or on problems where the tools and insight provided by differential algebraic equations could be useful would find this book resourceful

Surveys in Differential-Algebraic

Equations IV Achim Ilchmann, Timo Reis, 2017-03-08 The present volume comprises survey articles on various fields of Differential Algebraic Equations DAEs which have widespread applications in controlled dynamical systems especially in mechanical and electrical engineering and a strong relation to ordinary differential equations The individual chapters provide reviews presentations of the current state of research and new concepts in History of DAEs DAE aspects of mechanical multibody systems Model reduction of DAEs Observability for DAEs Numerical Analysis for DAEs The results are presented in an accessible style making this book suitable not only for active researchers but also for graduate students with a good knowledge of the basic principles of DAEs for self study

Semantics, Logics, and Calculi Christian W. Probst, Chris

Hankin, René Rydhof Hansen, 2016-01-07 This Festschrift volume is published in honor of Hanne Riis Nielson and Flemming Nielson on the occasion of their 60th birthdays in 2014 and 2015 respectively The papers included in this volume deal with the wide area of calculi semantics and analysis The book features contributions from colleagues who have worked together with Hanne and Flemming through their scientific life and are dedicated to them and to their work The papers were presented at a colloquium at the Technical University of Denmark in January 2016

Progress in Differential-Algebraic

Equations II Timo Reis, Sara Grundel, Sebastian Schöps, 2020-10-10 This book contains articles presented at the 9th Workshop

on Differential Algebraic Equations held in Paderborn Germany from 17-20 March 2019. The workshop brought together more than 40 mathematicians and engineers from various fields such as numerical and functional analysis, control theory, mechanics and electromagnetic field theory. The participants focussed on the theoretical and numerical treatment of descriptor systems, i.e. differential algebraic equations (DAEs). The book contains 14 contributions and is organized into four parts: mathematical analysis, numerics and model order reduction, control, as well as applications. It is a useful resource for applied mathematicians with interest in recent developments in the field of differential algebraic equations but also for engineers in particular those interested in modelling of constraint mechanical systems, thermal networks or electric circuits.
