Physical Systems of Systems CPSoS are considered The Next Computing Revolution after Mainframe computing 60 s 70 s Desktop computing because all aspects of daily life are rapidly evolving towards humans interacting amongst themselves as well as their environment via computational devices often mobile and because in most cases systems will employ their computational capabilities to interact amongst themselves CPSoS enable the physical world to merge with the cyber one Using sensors the embedded systems monitor and collect data from physical processes such as the steering of a vehicle energy consumption or human health functions The systems are networked making the data globally available CPSoS make it possible for software applications to directly interact with events in the physical world for example to measure and react to changes in blood pressure or peaks in energy consumption Embedded hardware and software systems crucially expand the functionality and competitiveness of vehicles aircraft medical equipment production plants and household appliances Connecting these systems to a virtual environment of globally networked services and information systems opens completely new areas of innovation and novel business platforms Future CPSoS will have many sophisticated interconnected parts that must instantaneously exchange parse and act on detailed data in a highly coordinated manner Continued advances in science and engineering will be necessary to enable advances in design and development of these complex systems *Essentials of Programming in Mathematica®* Paul Wellin,2016 This book covers Mathematica for beginners An example driven text covering a wide variety of applications containing over 350 exercises with solutions available online
