right to seek possible grounds for reconciliation between them Landy puts forth a Socratic theory of democratic liberalism as an example of such reconciliation

Leo Strauss, Max Weber, and the Scientific Study of Politics Nasser Behnegar,2021-08-27 Can politics be studied scientifically and if so how Assuming it is impossible to justify values by human reason alone social science has come to consider an unreflective relativism the only viable basis not only for its own operations but for liberal societies more generally Although the experience of the sixties has made social scientists more sensitive to the importance of values it has not led to a fundamental reexamination of value relativism which remains the basis of contemporary social science Almost three decades after Leo Strauss s death Nasser Behnegar offers the first sustained exposition of what Strauss was best known for his radical critique of contemporary social science and particularly of political science Behnegar s impressive book argues that Strauss was not against the scientific study of politics but he did

reject the idea that it could be built upon political science's unexamined assumption of the distinction between facts and values. Max Weber was for Strauss the most profound exponent of values relativism in social science, and Behnegar's explication artfully illuminates Strauss's critique of Weber's belief in the ultimate insolubility of all value conflicts. Strauss's polemic against contemporary political science was meant to make clear the contradiction between its claim of value-free premises and its commitment to democratic principles. As Behnegar ultimately shows, values, the ethical component lacking in a contemporary social science, are essential to Strauss's project of constructing a genuinely scientific study of politics.
