Q.1: Describe the structure of the body of Fungi?

Ans: STRUCTURE OF THE BODY OF FUNGUS:

- The fungi have very simple body. In majority of fungi the body consists of a network of branched thread like structures, called the Hyphae. When the hyphae form a mass, it is known as mycelium.
- The mycelium is of two types:
 - **Coenocytic Mycelium:**
In Zygomycota the mycelium is unseptate and multinucleate, it is called coenocytic mycelium. The septa are only formed at the time of reproduction.
 - **Septate Mycelium:**
In Ascomycetes and Basidiomycetes the mycelium is septate and hyphae are divided into cells. The cells may be uninucleate or multinucleate.
- The cells of mycelium are filled up with colorless cytoplasm, which contains nuclei and vacuoles. The food is stored in the form of glycogen or oil, starch is absent.
- In some fungi mycelium is not present. They have single celled structure. e.g. Yeast. The cell wall of mycelium does not consists of true cellulose. It is composed of Chitin or Fungal cellulose.

Q.2: Describe Saprophytic and Parasitic nutrition of Fungi?

Ans: SAPROPHYTIC FUNGI: (SAPROTROPHS)

These fungi obtain their food energy from dead organic matter. They secrete out digestive enzymes, which digest the organic matter, and then the organic molecules are absorbed by fungi by the help of modified hyphae, called rhizoids. These fungi are the decomposers. The particularly decompose cellulose and lignin, present in plant cell wall.

PARASITIC FUNGI:

The parasites depend upon other living plants and animals. They cause many diseases in plants, animals and human being. When the parasitic fungi grow on the external surface of the host body, they are called ectoparasites and when they live inside the host body, they are termed as endoparasites.
