Differential and Differential-Algebraic Systems for the Chemical Engineer Guido Buzzi-Ferraris, Flavio Manenti, 2015-01-12 Engineers and other applied scientists are frequently faced with models of complex systems for which no rigorous mathematical solution can be calculated To predict and calculate the behaviour of such systems numerical approximations are frequently used either based on measurements of real life systems or on the behaviour of simpler models This is essential work for example for the process engineer implementing simulation control and optimization of chemical processes for design and operational purposes This fourth in a suite of five practical guides is an engineer's companion to using numerical methods for the solution of complex mathematical problems It explains the theory behind current numerical methods and shows in a step by step fashion how to use them The volume focuses on differential and differential algebraic systems providing numerous real life industrial case studies to illustrate this complex topic It describes the methods innovative techniques and strategies that are all implemented in a freely available toolbox called BzzMath which is developed and maintained by the authors and provides up to date software tools for all the methods described in the book Numerous examples sample codes programs and applications are taken from a wide range of scientific and engineering fields such as chemical engineering electrical engineering physics medicine and environmental science As a result engineers and scientists learn how to optimize processes even before

entering the laboratory With additional online material including the latest version of BzzMath Library installation tutorial all examples and sample codes used in the book and a host of further examples

Fuel Cell Science and Engineering Detlef Stolten, Bernd Emonts, 2012-10-22 Fuel cells are expected to play a major role in the future power supply that will transform to renewable decentralized and fluctuating primary energies At the same time the share of electric power will continually increase at the expense of thermal and mechanical energy not just in transportation but also in households Hydrogen as a perfect fuel for fuel cells and an outstanding and efficient means of bulk storage for renewable energy will spearhead this development together with fuel cells Moreover small fuel cells hold great potential for portable devices such as gadgets and medical applications such as pacemakers This handbook will explore specific fuel cells within and beyond the mainstream development and focuses on materials and production processes for both SOFC and lowtemperature fuel cells analytics and diagnostics for fuel cells modeling and simulation as well as balance of plant design and components As fuel cells are getting increasingly sophisticated and industrially developed the issues of quality assurance and methodology of development are included in this handbook The contributions to this book come from an international panel of experts from academia industry institutions and government This handbook is oriented toward people looking for detailed information on specific fuel cell types their materials production processes modeling and analytics Overview information on the contrary on mainstream fuel cells and applications are provided in the book Hydrogen and Fuel Cells published in 2010

Numerical Simulation of Rotary Sliding Vane Pumps Mohammed Akmal Ammar, A pump is a mechanical device that converts mechanical energy into hydraulic energy The aim of the current work is to examine the behavior of fluid flow inside a rotary sliding vane pump and assessing the performance by studying the effect of change of the rotational speed number of vanes and the radial clearance gap size between vane tips and stator surface on the performance of the pump The commercial finite volume solver ANSYS Fluent was used to build a 3D model of the pump and simulate the flow behavior in it with an additional C language source code for the description of the dynamic mesh motion Pump flow was studied using lubricating oil 5W 30 as the working fluid Several computational configurations were used for the numerical simulation
