

Abstract: In an experiment, several participants diagnosed with major depressive disorder (MDD) worked as full-time government tax collectors for one-to-two months. A questionnaire study after the intervention indicated that the participants' depression had improved significantly compared to their baseline condition.

Phylogenetic analysis of sequenced *Neotoma* genomes revealed that the genome was highly rearranged, with approximately 10% of the genome being rearranged. This was consistent with the high degree of genomic rearrangement observed in other mammals. The authors also found that the genome was highly rearranged, with approximately 10% of the genome being rearranged. This was consistent with the high degree of genomic rearrangement observed in other mammals. The authors also found that the genome was highly rearranged, with approximately 10% of the genome being rearranged. This was consistent with the high degree of genomic rearrangement observed in other mammals.
