

This concept brings together the general ideas on cell communication from Chapter 11 with specific examples of signal transduction in plants. As with animals, plants have receptors that trigger signal transduction pathways when activated. Let's begin with a review of three steps in signal transduction.

Step 3: Response. Cellular response is primarily accomplished by two mechanisms:

- Have you ever seen a shriveled potato sprouting out skinny, pale sprouts? What is this called?
- If you move the potato into the light, the sprout will respond by forming short, sturdy stems and broad, green leaves. What is this response to light called?
- The figure below gives a specific example of a signal transduction in plants for the growing or *de-etiolation* response described above. Label these parts of the figure: receptor, transduction, response, phytochrome, signal, Ca^{2+} channel, second messenger (cGMP), protein kinase, transducing factor, and DNA.
