

counterambush measures. When a destruction ambush is deployed in this manner, narrow lanes are left so the target can be assaulted. An advantage of the line formation is its relative ease of control under all conditions of visibility.

The L

The L-shaped formation is a variation of the line formation. The long side of the attack force is parallel to the killing zone and delivers flanking fire. The short side of the attack force is at the end of, and at right angles to, the killing zone and delivers enfilading fire that interlocks with fire from the other leg. This formation is very flexible. You can establish it on a straight stretch of a trail, stream, or at a sharp bend in a trail or stream. When appropriate, fire from the short leg can be shifted to parallel the long leg if the target attempts to assault or escape in the opposite direction. In addition, the short leg prevents escape in its direction and reinforcement from its direction.

The Z

The Z-shaped formation is another variation of the line formation. The attack force is deployed as in the L formation, but with an additional side to the formation resembling the letter Z. The additional side may serve any of the following purposes:

1. To engage a force attempting to relieve or reinforce the target.
2. To seal the end of the killing zone.
3. To restrict a flank.
4. To prevent envelopment.

The T

In the T-shaped formation, the attack force is deployed across and at right angles to the target's route of movement so the attack force and the target form the letter T. This formation can be used day or night to establish a purely harassing ambush and, at night, to establish an ambush to stop or hamper enemy movement through open, hard-to-seal areas, such as rice paddies.

A small force can use the T formation to harass, slow, and disorganize a larger force. When the lead elements of the target are engaged, they normally attempt to maneuver right or left to close the ambush. Mines, man-traps, and other obstacles placed in the flanks of the killing zone slow the movements of the enemy. They also permit the ambush force to deliver

heavy fire and withdraw without becoming decisively engaged. An ambush established and executed in this manner is called a "bloody nose" ambush.

The T formation can be used to stop or hamper small groups attempting night movement across open areas. For example, you can deploy the attack force along a rice-paddy dike with every second man facing in the opposite direction. The attack of a target approaching from either direction requires only that every second man shift to the opposite side of the dike. Each man fires only to his front and only when the target is at very close range. Attack is by fire only and each man keeps the target under fire as long as it remains on his front. When the target attempts to escape in either direction along the dike, each man takes it under fire as it comes to his vicinity. The T formation is very effective at halting infiltration. But it has one chief disadvantage—there is a possibility that the ambush will engage a superior force at night while spread out; therefore, use of this formation must fit the local enemy situation.

The V

Deploy the V-shaped attack force along both sides of the target's route of movement so it forms the letter V. Care is taken to ensure that neither group nor leg fires into the other. This formation subjects the target to both enfilading and interlocking fire. The V formation is best suited for fairly open terrain but can also be used in the jungle. When established in the jungle, the legs of the V close in as the head elements of the target approach the apex of the V and open fire from close range. Here, even more than in open terrain, all movement and fire must be carefully coordinated and controlled to ensure that the fire of one leg does not endanger the other. The wider separation of forces makes this formation difficult to control, and there are fewer sites that favor its use. The main advantage of the V formation is the target has difficulty detecting the ambush until the ambush force is well into the killing zone.

COUNTERAMBUSH DRILLS

When a patrol is ambushed, the immediate action drill to use is determined by whether the ambush is near or far.

In a NEAR ambush, the killing zone is under heavy, highly concentrated, close-range fire. There is little time or space for men to maneuver or seek cover. The longer they remain in the killing zone, the more certain their destruction; therefore, if attacked by a NEAR ambush, the patrol should react as follows:

 Ngoc Lung,2015-11-06 Includes over 10 maps and illustrations This monograph forms part of the Indochina Monograph
 series written by senior military personnel from the former Army of the Republic of Vietnam who served against the northern
 communist invasion During the war years the Republic of Vietnam and the United States pursued a common goal their armed
 forces fought against the same enemy under the same campaign plan with the same weapon systems and in the same
 environment The strategic approaches to fighting this war however evolved through several stages depending on the enemy s
 kind of warfare and force structure so did the tactics designed to counter his large unit and guerrilla activities This
 monograph endeavors therefore to trace back and evaluate our strategic alternatives at each stage of the war and the
 evolving tactics employed with particular emphasis on the period of American withdrawal and reduced support In the
 preparation of this monograph I have expressly confined my discussions of strategy to its military aspect While this conforms
 to the limited scope of a military subject the encompassing nature of strategy especially one conceived to face the enemy s

approach to total war implies that for a better understanding of military strategy the interplay of social political and economic factors should also be brought in as a backdrop Therefore wherever appropriate I have found it necessary to place strategic discussions in the total war context Author s Introduction
