Introduction to Nonparametric Detection with Applications Jerry D. Gibson, James L. Melsa, 1976-01-22 Even with the advances in signal processing and digital communications robustness to uncertain channel statistics continues to be a fundamental issue in the design and performance analysis of today's communications radar and sonar systems. The variability of digital communications systems consistently challenges the communications system designer while new applications have channels that almost defy accurate modeling. As a result, parametric detectors which are excellent when model assumptions are satisfied do not maintain the satisfactory performance necessary for detection. This core IEEE Press reissue is the only book devoted solely to nonparametric detection, the key to maintaining good performance over a wide range of conditions. Throughout, the authors employ the classical Neyman-Pearson approach which is widely applicable to detection problems in communications, radar, sonar, acoustics, and geophysics. Topics covered include nonparametric detection theory, basic detection theory, one input and two input detectors, and performance tied observations dependent sample performance and engineering applications.

Proceedings of the 10th International Conference on Rotor Dynamics - IFToMM Katia Lucchesi Cavalca, Hans Ingo Weber, 2018-08-20 IFToMM conferences have a history of success due to the various advances achieved in the field of rotor dynamics over the past three decades. These meetings have since become a leading global event bringing together specialists from industry and academia to promote the exchange of knowledge, ideas, and information on the latest developments in the dynamics of rotating machinery. The scope of the conference is broad, including e.g. active components and vibration control, balancing, bearings, condition monitoring, dynamic analysis, and stability of wind turbines and generators, electromechanical interactions in rotor dynamics, and turbochargers. The proceedings are divided into four volumes. This fourth volume covers the following main topics: aero engines, turbochargers, eolian wind generators, automotive rotating systems, and hydro power plants.

The 24 revised full papers, 4 industry papers, and 11 short papers presented were carefully reviewed and selected from 104 submissions. The papers cover a broad range of topics related to professional software development and process improvement driven by product and service quality needs. They are organized in topical sections on testing, software development, technical debt, estimations, continuous delivery, agile project management, microservices, and continuous experimentation. This book also includes papers from the co-located events: 10 project papers, 8 workshop papers, and 4 tutorial summaries.

Enzyme Handbook 14 Dietmar Schomburg, Dörte Stephan, 2012-12-06 Today, as the large international genome sequence projects are gaining a great amount of public attention and huge sequence data bases are

created it becomes more and more obvious that we are very limited in our ability to access functional data for the gene products the proteins in particular for enzymes Those data are inherently very difficult to collect interpret and standardize as they are highly distributed among journals from different fields and are often subject to experimental conditions Nevertheless a systematic collection is essential for our interpretation of the genome information and more so for possible applications of that knowledge in the fields of medicine agriculture etc Recent progress on enzyme immobilization enzyme production enzyme inhibition coenzyme regeneration and enzyme engineering has opened up fascinating new fields for the potential application of enzymes in a large range of different areas It is the functional profile of an enzyme that enables a biologist or physician to analyze a metabolic pathway and its disturbance it is the substrate specificity of an enzyme which tells an analytical biochemist how to design an assay it is the stability specificity and efficiency of an enzyme which determines its usefulness in the biotechnical transformation of a molecule And the sum of all these data will have to be considered when the designer of artificial biocatalysts has to choose the optimum prototype to start with

Participation and Partnership in Urban Infrastructure Management Peter Schübeler, 1996-01-01 This paper describes and illustrates a range of participatory strategies to assist urban managers in expanding the role and effectiveness of user participation in the provision and operation and maintenance of infrastructure To demonstrate how participation has been effectively employed in various circumstances numerous case studies are cited Finally measures and steps are outlined that could be instrumental in realizing participatory strategies Adapted by the author

Class 5: Isomerases Dietmar Schomburg, Ida Schomburg, 2001-06-20 The Springer Handbook of Enzymes provides concise data on some 5 000 enzymes sufficiently well characterized and here is the second updated edition Their application in analytical synthetic and biotechnology processes as well as in food industry and for medicinal treatments is added Data sheets are arranged in their EC Number sequence The new edition reflects considerable progress in enzymology the total material has more than doubled and the complete 2nd edition consists of 39 volumes plus Synonym Index Starting in 2009 all newly classified enzymes are treated in Supplement Volumes

Household Responses to Poverty and Vulnerability Caroline O. N. Moser, Cathy McIlwaine, Jeremy Holland, 1997 This research paper describes the main results from the community of Angyalfold in Budapest Hungary The research is concerned with the strategies adopted by the urban poor to reduce vulnerability and prevent impoverishment during periods of economic stress This type of study assists policymakers in designing effective locally based solutions that ensure the poor are themselves active agents of growth rather than passive recipients of compensatory measures Three features distinguish this study from other poverty studies a micro level approach combining households and communities as the main units of analysis an unusually long period of observation for some communities and households and a comparative framework offering four cases with very different economic development levels and institutional contexts The study concludes with some priority recommendations for action 1 support households in their role as safety net 2 alleviate constraints on women s
