Introduction to Nonparametric Detection with Applications Jerry D. Gibson,James L Melsa,1976-01-22 Even with the advances in signal processing and digital communications robustness to uncertain channel statistics continues to be a fundamental issue in the design and performance analysis of today s communications radar and sonar systems The variability of digital communications systems consistently challenges the communications system designer while new applications have channels that almost defy accurate modeling As a result parametric detectors which are excellent when model assumptions are satisfied do not maintain the satisfactory performance necessary for detection This core IEEE Press reissue is the only book devoted solely to nonparametric detection the key to maintaining good performance over a wide range of conditions Throughout the authors employ the classical Neyman Pearson approach which is widely applicable to detection problems in communications radar sonar acoustics and geophysics Topics covered include nonparametric detection theory basic detection theory one input and two input detectors and performance tied observations dependent sample performance and engineering applications

Enzyme Handbook 14 Dietmar Schomburg,Dörte Stephan,2012-12-06 Today as the large international genome sequence projects are gaining a great amount of public attention and huge sequence data bases are created it be comes more and more obvious that we are very limited in our ability to access functional data for the gene products the proteins in particular for enzymes Those data are inherently very difficult to collect interpret and standardize as they are highly distributed among journals from different fields and are often sub ject to experimental conditions Nevertheless a systematic collection is essential for our interpretation of the genome information and more so for possible appli cations of that knowledge in the fields of medicine agriculture etc Recent pro gress on enzyme immobilization enzyme production enzyme inhibition coen zyme regeneration and enzyme engineering has opened up fascinating new fields for the potential application of enzymes in a large range of different areas It is the functional profile of an enzyme that enables a biologist of physician to analyze a metabolic pathway and its disturbance it is the substrate specificity of an enzyme which tells an analytical biochemist how to design an assay it is the stability specificity and efficiency of an enzyme which determines its usefulness in the biotechnical transformation of a molecule And the sum of all these data will have to be considered when the designer of artificial biocatalysts has to choose the optimum prototype to start with
