Sleep Spindles: Breaking the Methodological Wall Christian O'Reilly, Simon C. Warby, Tore Nielsen, 2017-03-07 In the last decade sleep spindles have attracted steadily increasing attention This interest is motivated by the many intriguing relationships between spindles and various diseases e g schizophrenia Parkinson Alzheimer autism mental retardation recovery processes e g post brain stroke and cognitive faculties e g memory consolidation intelligence dream recall sleep preservation Nonetheless a methodological wall has impeded the study of sleep spindles Their investigation rests heavily on

our ability to reliably and consistently identify spindle patterns from background EEG activity a task involving many obstacles including a fuzzy definition of spindles low inter expert agreement on their scoring lack of consensus on standard techniques for their automated detection low reproducibility of observed characteristics and correlates unavailability of large standardized high quality databases and inconsistencies in the methods used to evaluate the performance of automated detectors The primary aims of this research topic were to bring together world class researchers on a project designed to facilitate exchanges on methodological difficulties encountered in assessing sleep spindles and to promote standardized spindle related resources In preparing their contributions authors were encouraged to use existing or to propose new publicly available resources for assessing sleep spindles To allow fair and accurate comparison of reported results the authors were also encouraged to validate their tools on a common benchmark A database containing expert spindle scoring is the Montreal Archive of Sleep Studies was made publicly available for that purpose

Endothelial Dysfunction During Inflammation and Alloimmunity Olaf Penack, Thomas Luft, 2019-04-09 Endothelial cells form the inner lining of blood and lymphatic vessels and they have frequent interactions with immune cells as well as foreign agents Endothelial function is crucially involved in physiologic immunity at different stages including recruitment of leukocytes angiogenesis and tissue repair Endothelial dysfunction is a not well defined term it is widely used to describe the non physiologic activity of endothelial cells It has been suggested that endothelial dysfunction plays a role in a variety of human diseases such as arteriosclerosis cancer autoimmunity and sepsis More recently a role of lymphatic endothelial cells as well as vascular endothelial cells in the pathophysiology of inflammation and allo immune reactions has been suggested Development of novel therapeutic approaches to normalize endothelial dysfunction is currently an unmet medical need Until now the cellular and molecular mechanisms of mutual influences between endothelial dysfunction and human diseases remain largely unexplored constituting a frontier hindering the development of new therapies This Research Topic aims to build a forum for a wide range of scientific studies in the fields of endothelial dysfunction during inflammatory diseases and transplantation
