Fault Detection and Diagnosis Constantin Volosencu, 2018-11-07 This book offers a selection of papers in the field of fault detection and diagnosis promoting new research results in the field which come to join other publications in the literature. Authors from countries of four continents: United States of America, South Africa, China, India, Algeria, and Croatia published worked examples and case studies resulting from their research in the field. Fault detection and diagnosis has a great importance in all industrial processes to assure the monitoring, maintenance, and repair of the complex processes including all hardware, firmware, and software. The book has four sections determined by the application domain and the methods used: 1 Hybrid Computing Systems, 2 Power Systems, 3 Power Electronics, and 4 Kalman Filtering. In the first section, the readers will find a technical report on fault diagnosis of hybrid computing systems based on the chaotic map method that uses the exponential divergence and wide Fourier properties of the trajectories combined with memory allocations and assignments. In the second section, two chapters are included; one of them presents a study on preventive maintenance and fault detection for wind turbine generators using statistical models, and the second chapter presents a technical report on fault diagnosis for turbo generators based on the mechanical-electrical intersectional characteristics. The third section contains a technical report that presents some techniques of detection and localization of open circuit faults in a three-phase voltage source inverter-fed induction motor. The fourth section presents a theoretical study on the application of distributed discrete-time linear Kalman filtering with decentralized structure of sensors in fault residual generation.

Contemporary Topics in Finance Iris Claus, Leo Krippner, 2019-04-29 The literature surveys presented in this edited volume provide readers with up-to-date reviews on eleven contemporary topics in finance. Topics include unconventional monetary policy, implicit bank guarantees, and financial fraud, all linked to the exceptional event of the Global Financial Crisis. Explores how recent studies on inflation risk premia and finance and productivity have benefitted from new empirical methods and the availability of relevant data. Demonstrates how angel investing, venture capital, relationship lending, and microfinance have benefitted from increased research as they have become more seasoned. Investigates crowdfunding and cryptocurrencies which have both arisen from recent technological developments.
