International Symposium in Memory of Hua Loo Keng Sheng Gong, Qi-keng Lu, Yuan Wang, Lo Yang, 2013-12-21 The international symposium on number theory and analysis in memory of the late famous Chinese mathematician Professor Hua Loo Keng took place in August 1988 at the Tsinghua University in Beijing Excellent survey lectures and expositions of the most recent results in number theory and analysis were given by experts from all over the world While Volume I focuses on number theory Volume II deals mainly with several complex variables differential geometry and classical complex analysis Both volumes also include two fascinating accounts of Professor Hua Loo Keng's life and work by Professor S Iyanaga and Professor Wang Yuan Highlights in Volume I D A Hejhal Eigenvalues of the Laplacian for $PSL(2, \mathbb{Z})$ Some new Results and Computational Techniques A A Karatsuba On the Zeros of Riemann's Zeta Function on the Critical Line H E Richert Aspects of the Small Sieve W M Schmidt On the Number of Good Simultaneous Approximations to Algebraic Numbers M V Subbarao Wang Yuan On a Generalized Waring's Problem in Algebraic Number Fields G WA1 4stholz From Baker to Mordell Highlights in Volume II F Capocasa F Catanese Periodic Meromorphic Functions and Lefschetz Type Theorems on Quasi Abelian Varieties S S Chern Families of Hypersurfaces Under Contact Transformations in $\mathbb{R}^n$ G Dethloff H Grauert On the Infinitesimal Deformation of Simply Connected Domains in One Complex Variable D Drasin Asymptotic Periods of Entire and Meromorphic Functions D Gaier On the Convergence of the Bieberbach Polynomials in Regions With Corners Gong Sheng Zheng Xuena Distortion Theorem for Biholomorphic Mappings in Transitive Domains I C O Kiselman Tangents of Plurisubharmonic Functions A Koranyi Hua Type Integrals Hypergeometric Functions and Symmetric Polynomials J Mitchell Two Sided L^1 Estimates for Szegő Kernels on Classical Domains I Satake On the Rational Structures of Symmetric Domains I Y T Siu Some Problems of Rigidity in Several Complex Variables S T Yau F Zheng On Projective Manifolds Covered by Space in $\mathbb{C}^n$

Graph Theory and Applications Y. Alavi, D. R. Lick, A. T. White, 2006-11-15

A Course in Analytic Number Theory Marius Overholt, 2014-12-30 This book is an introduction to analytic number theory suitable for beginning graduate students It covers everything one expects in a first course in this field such as growth of arithmetic functions existence of primes in arithmetic progressions and the Prime Number Theorem But it also covers more challenging topics that might be used in a second course such as the Siegel Walfisz theorem functional equations of L functions and the explicit formula of von Mangoldt For students with an interest in Diophantine analysis there is a chapter on the Circle Method and Waring's Problem Those with an interest in algebraic number theory may find the chapter on the analytic theory of number fields of interest with proofs of the Dirichlet unit theorem the analytic class number formula the functional equation of the Dedekind zeta function and the Prime Ideal Theorem The exposition is both clear and precise

reflecting careful attention to the needs of the reader The text includes extensive historical notes which occur at the ends of the chapters The exercises range from introductory problems and standard problems in analytic number theory to interesting original problems that will challenge the reader The author has made an effort to provide clear explanations for the techniques of analysis used No background in analysis beyond rigorous calculus and a first course in complex function theory is assumed

Number Theory R.P. Bambah,V.C. Dumir,R.J. Hans-Gill,2012-12-06 The Indian National Science Academy on the occasion of the Golden Jubilee Celebration Fifty years of India's Independence decided to publish a number of monographs on the selected fields The editorial board of INS A invited us to prepare a special monograph in Number Theory In response to this assignment we invited several eminent Number Theorists to contribute expository research articles for this monograph on Number Theory Although some of those invited due to other preoccupations could not respond positively to our invitation we did receive fairly encouraging response from many eminent and creative number theorists throughout the world These articles are presented herewith in a logical order We are grateful to all those mathematicians who have sent us their articles We hope that this monograph will have a significant impact on further development in this subject R P Bambah v C Dumir R J Hans Gill A Centennial History of the Prime Number Theorem Tom M Apostol The Prime Number Theorem Among the thousands of discoveries made by mathematicians over the centuries some stand out as significant landmarks One of these is the prime number theorem which describes the asymptotic distribution of prime numbers It can be stated in various equivalent forms two of which are $\pi(x) \sim \frac{x}{\log x}$ and $\sum_{p \leq x} \frac{1}{p} \sim \log \log x$ $\pi(x)$ denotes the number of primes $P \leq x$ for any $x > 0$

ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical En cyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathe matics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques **THE EDUCATIONAL TIMES, AND JOURNAL OF THE COLLEGE PRECEPTORS.** c.f

hodgson and sons,2, gough square,1880 **Area, Lattice Points, and Exponential Sums** M. N. Huxley,1996-06-13 In analytic number theory a large number of problems can be reduced to problems involving the estimation of exponential sums in one or several variables This book is a thorough treatment of the developments arising from the method developed by Bombieri and Iwaniec in 1986 for estimating the Riemann zeta function on the line $s = 1/2$ Huxley and his coworkers mostly Huxley have taken this method and vastly extended and improved it The powerful techniques presented here go considerably beyond older methods for estimating exponential sums such as van de Corput's method The potential for the method is far from being exhausted and there is considerable motivation for other researchers to try to master this subject However anyone currently trying to learn all of this material has the formidable task of wading through numerous papers in the literature This book simplifies that task by presenting all of the relevant literature and a good part of the background in one package The audience for the book will be mathematics graduate students and faculties with a research interest in analytic theory more specifically those with an interest in exponential sum methods The book is self contained any graduate student with a one semester course in analytic number theory should have a more than sufficient background
