Species Diversity of Animals in Japan Masaharu Motokawa, Hiroshi Kajihara, 2016-11-26

This book summarizes the status quo of the knowledge about the biodiversity in terrestrial freshwater and marine animals that live in Japan. Consisting of some 6 800 islands that are arrayed for approximately 3 500 km from north to south, the Japanese archipelago has a complex history in a paleogeographic formation process over time and harbors rich flora and fauna. This work will contribute to establishing a general biogeographic theory in archipelagoes around continental shelves. Facing the ongoing extinction crisis, one of the most important tasks for our generation is to bequeath this precious natural heritage to future generations. As the first step toward this goal, a species list has been compiled through solid steady alpha taxonomic work in each taxon. Furthermore, the phylogeography and population genetic structure for each species is elucidated for deeper understanding of the local fauna, the scientific results of which should be the basis for establishing conservation policies and strategies. Also, the problem of alien or introduced species is investigated as another threat to the native fauna. Each of the 27 chapters is written by the most active specialist leading the field, thus readers can acquire up-to-date knowledge of the animal species diversity and their formation process of Japanese animals in the most comprehensive form available. This book is recommended for researchers and students who are interested in species diversity, biogeography, and phylogeography.

Edible Seaweeds of the World Leonel Pereira, 2016-01-08

Seaweed is used in many countries for very different purposes, directly as food, especially in sushi, as a source of phycocolloids, extraction of compounds with antiviral, antibacterial, or antitumor activity, and as biofertilizers. About four million tons of seaweed are harvested annually worldwide. Of the various species known, less than 20 account

Recent Advances in

Geomicrobiology of the Ocean Crust Beth N. Orcutt, Jason B. Sylvan, Cara M. Santelli, 2017-09-29

Igneous oceanic crust is one of the largest potential habitats for life on earth, and microbial activity supported by rock-water microbe reactions in this environment can impact global biogeochemical cycles. However, our understanding of the microbiology of this system, especially the subsurface deep biosphere component of it, has traditionally been limited by sample availability and quality. Over the past decade, several major international programs, such as the Center for Dark Energy Biosphere Investigations, the current International Ocean Discovery Program, and its predecessor Integrated Ocean Drilling Program, and the Deep Carbon Observatory, have focused on advancing our understanding of life in this cryptic yet globally relevant biosphere. Additionally, many field and laboratory research programs are examining hydrothermal vent systems, a seafloor expression of seawater that has been thermally and chemically altered in subseafloor crust, and the microbial communities supported by these mineral-rich fluids. The *Frontiers in Microbiology* 3 September 2017 *Recent Advances in Geomicrobiology of the Ocean Crust* papers in this special issue bring together recent discoveries of microbial presence, diversity, and activity in these dynamic ocean environments. Cumulatively, the articles in this special issue serve as a tribute to the late Dr. Katrina J. Edwards, who was a pioneer and profound champion of studying microbes that rust the crust. This special issue volume serves as a foundation

for the continued exploration of the subsurface ocean crust deep biosphere **Coral Reefs and Associated Marine Fauna around the Arabian Peninsula** Najeeb M.A. Rasul, Ian C.F. Stewart, 2024-07-15 Coral Reefs and Associated Marine Fauna around the Arabian Peninsula is a unique text that contains studies on a diverse range of topics related to the biology of the Red Sea and Arabian Persian Gulf region. Containing invited and peer reviewed chapters, this book is a compilation of the works of various experts in their respective fields. The authors delve into the marine fauna around the Arabian Peninsula, including marine reptiles and mammals, coral reefs, fish, invertebrates, algae, and phytoplankton. They also explore the changes resulting from anthropogenic and climate effects. This book will be a helpful resource for researchers in Biology and will also be a valuable reference for anyone interested in the biology of these two warm semi-isolated seas with their unique environments.
