Lamarck's Revenge Peter Ward, 2018-08-14 A riveting explanation of epigenetics offering startling insights into our inheritable traits In the 1700s Jean Baptiste Lamarck first described epigenetics to explain the inheritance of acquired characteristics however his theory was supplanted in the 1800s by Darwin's theory of evolution by natural selection through heritable genetic mutations But natural selection could not adequately explain how rapidly species re diversified and repopulated after mass extinctions Now advances in the study of DNA and RNA have resurrected epigenetics which can create radical physical and physiological changes in subsequent generations by the simple addition of a single small molecule thus passing along a propensity for molecules to attach in the same places in the next generation Epigenetics is a complex process but paleontologist and astrobiologist Peter Ward breaks it down for general readers using the epigenetic paradigm to reexamine how the history of our species from deep time to the outbreak of the Black Plague and into the present has left its mark on our physiology behavior and intelligence Most alarming are chapters about epigenetic changes we are undergoing now triggered by toxins environmental pollutants famine poor nutrition and overexposure to violence Lamarck's Revenge is an eye opening and provocative exploration of how traits are inherited and how outside influences drive what we pass along to our progeny

Citizen Knowledge Lisa Herzog, 2023-09-15 Citizen Knowledge discusses how various forms of knowledge are dealt with in societies that combine a democratic political system with a capitalist economic system How do citizens learn about politics How are scientific insights taken up in politics What role can markets play for processing decentralized knowledge Lisa Herzog argues that the fraught relation between democracy and capitalism gets out of balance if too much knowledge is treated according to the logic of markets Complex societies need different mechanisms for dealing with knowledge among which democratic deliberation and expert communities are central Citizen Knowledge develops the vision of an egalitarian society that considers the use of knowledge in society a matter of shared democratic responsibility

New Topological Invariants For Real- And Angle-valued Maps: An Alternative To Morse-Novikov Theory Dan Burghelea, 2017-08-16 This book is about new topological invariants of real and angle valued maps inspired by Morse Novikov theory a chapter of topology which has recently raised interest outside of mathematics for example in data analysis shape recognition computer science and physics They are the backbone of what the author proposes

as a computational alternative to Morse Novikov theory referred to in this book as AMN theory These invariants are on one side analogues of rest points instantons and closed trajectories of vector fields and on the other side refine basic topological invariants like homology and monodromy They are associated to tame maps considerably more general than Morse maps that are defined on spaces which are considerably more general than manifolds They are computable by computer implementable algorithms and have strong robustness properties They relate the dynamics of flows that admit the map as Lyapunov map to the topology of the underlying space in a similar manner as Morse Novikov theory does
