

# Systems of Algebraic Methods: **SLT**

Part 11

The "substitution" method involves two main algebraic systems of equations algebraically.

| $x + 2y = 11$<br>$3x + 4y = 25$ | $x + 2y = 11$<br>$3x + 4y = 25$                                                                    | $x + 2y = 11$ |
|---------------------------------|----------------------------------------------------------------------------------------------------|---------------|
|                                 | Substitute a variable in terms of the replacement (dependent) variable into the other equation(s). |               |
|                                 | Put the other equation, replacing the variable with its equivalent expression.                     |               |
|                                 | Solve for the numerical value of the variable.                                                     |               |
|                                 | Substitute the answer into another equation to find the value of the other variable.               |               |

• Which variable you select?

One equation, without solving identify which variable is which dependent it would be easiest to solve for that variable using this variable is called the **dependent** one.

| $x + 2y = 11$<br>$3x + 4y = 25$                   | $x + 2y = 11$<br>$3x + 4y = 25$                      | $x + 2y = 11$<br>$3x + 4y = 25$                   | $x + 2y = 11$<br>$3x + 4y = 25$                      |
|---------------------------------------------------|------------------------------------------------------|---------------------------------------------------|------------------------------------------------------|
| Substitute $x = 11 - 2y$ into the other equation. | Substitute $y = (11 - x)/2$ into the other equation. | Substitute $x = 11 - 2y$ into the other equation. | Substitute $y = (11 - x)/2$ into the other equation. |

Substitute the expression. Solve for the variable.

| $x + 2y = 11$<br>$3x + 4y = 25$                   | $x + 2y = 11$<br>$3x + 4y = 25$                      | $x + 2y = 11$<br>$3x + 4y = 25$                   | $x + 2y = 11$<br>$3x + 4y = 25$                      |
|---------------------------------------------------|------------------------------------------------------|---------------------------------------------------|------------------------------------------------------|
| Substitute $x = 11 - 2y$ into the other equation. | Substitute $y = (11 - x)/2$ into the other equation. | Substitute $x = 11 - 2y$ into the other equation. | Substitute $y = (11 - x)/2$ into the other equation. |
