*Recipes* Richard Enns, George C. McGuire, 2013-03-07 Computer algebra systems have the potential to revolutionize the teaching of and learning of science Not only can students work thorough mathematical models much more efficiently and with fewer errors than with pencil and paper they can also work with much more complex and computationally intensive models Thus for example in studying the flight of a golf ball students can begin with the simple parabolic trajectory but then

add the effects of lift and drag of winds and of spin Not only can the program provide analytic solutions in some cases it can also produce numerical solutions and graphic displays Aimed at undergraduates in their second or third year this book is filled with examples from a wide variety of disciplines including biology economics medicine engineering game theory physics chemistry The text is organized along a spiral revisiting general topics such as graphics symbolic computation and numerical simulation in greater detail and more depth at each turn of the spiral The heart of the text is a large number of computer algebra recipes These have been designed not only to provide tools for problem solving but also to stimulate the reader's imagination Associated with each recipe is a scientific model or method and a story that leads the reader through steps of the recipe Each section of recipes is followed by a set of problems that readers can use to check their understanding or to develop the topic further
