Reproducibility and Replicability in Science National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Committee on Science, Engineering, Medicine, and Public Policy, Board on Research Data and Information, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Board on Mathematical Sciences and Analytics, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Reproducibility and Replicability in Science, 2019-10-20 One of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it When a scientific effort fails to independently confirm the computations or results of a previous study some fear that it may be a symptom of a lack of rigor in science while others argue that such an observed inconsistency can be an important precursor to new discovery Concerns about reproducibility and replicability have been expressed in both scientific and popular media As these concerns came to light Congress requested that the National Academies of Sciences Engineering and Medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research Reproducibility and Replicability in Science defines reproducibility and replicability and examines the factors that may lead to non reproducibility and non replicability in research Unlike the typical expectation of reproducibility between two computations expectations about replicability are more nuanced and in some cases a lack of replicability can aid the process of scientific discovery This report provides recommendations to researchers academic institutions journals and funders on steps they can take to improve reproducibility and replicability in science

 Feng, Shengwei Hou, Feixue Fu, Michael Yu Roleda, 2022-10-17 China, Trust and Digital Supply Chains Warwick
 Powell, 2022-09-01 China Trust and Digital Supply Chains presents a critical reflection on blockchain technologies in the
 context of their adoption in China and the world that China is engaged in and shaping Approaching the issues of blockchain
 technology adoption and development on China s own terms is critical if policy makers and others are to make effective sense
 of one of the key dynamics shaping the next few decades of the global landscape The work challenges the trust trope that
 dominates much discussion of blockchain technology s application It argues contrary to the predominant trust trope that
 blockchain is not about trust at all It shows that China s re imagining of the 21st century global order is premised on driving
 intensified cross border economic interactions without the presupposition of trust and blockchain technology makes that

possible It also explores the paradox of technological decentralisation being taken up with vigour by a centralist polity the role of blockchain technology as a critical condition of existence for the successful globalisation of China's digital currency initiative and the need to devise governance institutions that are multilateral in nature to reflect the multi polar nature of decentralised information systems with domestic and cross border permutations This book is of significant interest to readers of political economy public policy blockchain technology and Chinese studies **Scaled for Success** Philip
