Stamate, Tomasz Szemberg, 2020-09-01 This proceedings volume presents selected peer reviewed contributions from the 26th National School on Algebra which was held in Constanța Romania on August 26 September 1 2018 The works cover three fields of mathematics algebra geometry and discrete mathematics discussing the latest developments in the theory of monomial ideals algebras of graphs and local positivity of line bundles Whereas interactions between algebra and geometry go back at least to Hilbert the ties to combinatorics are much more recent and are subject of immense interest at the forefront of contemporary mathematics research Transplanting methods between different branches of mathematics has proved very fruitful in the past for example the application of fixed point theorems in topology to solving nonlinear differential equations in analysis Similarly combinatorial structures e.g. Newton Okounkov bodies have led to significant advances in our understanding of the

asymptotic properties of line bundles in geometry and multiplier ideals in algebra This book is intended for advanced graduate students young scientists and established researchers with an interest in the overlaps between different fields of mathematics A volume for the 24th edition of this conference was previously published with Springer under the title Multigraded Algebra and Applications ISBN 978 3 319 90493 1 **Uses of Technology in Primary and Secondary**

Richard T. Serpe,Robin Stryker,Brian Powell,2020-04-22 This book examines identity theory s centrality within social psychology and its foundations within structural symbolic interaction highlighting its links not only to other prominent sociological subfields but also to other theoretical perspectives within and beyond sociology The book provides a synthetic overview outlining the intellectual lineage of identity theory within structural symbolic interactionism and how the Indiana School of identity theory and research associated especially with Sheldon Stryker relates to other symbolic interactionist traditions within sociology It also analyses the latest developments in response to the push to integrate identity theory which initially focused on role identities with the study of personal group and social identities Further it discusses the relationship between identity theory and affect control theory providing a sense of the many substantive topics within sociology beyond social psychology for which the study of identity has important sometimes underappreciated implications The book concludes with a chapter summarizing the interrelated lessons learned while also reflecting on remaining key questions and challenges for the future development of identity theory **Computer Algebra in Scientific Computing** Andreas Weber,2019-11-04

Although scientific computing is very often associated with numeric computations the use of computer algebra methods in scientific computing has obtained considerable attention in the last two decades Computer algebra methods are especially suitable for parametric analysis of the key properties of systems arising in scientific computing The expression based computational answers generally provided by these methods are very appealing as they directly relate properties to parameters and speed up testing and tuning of mathematical models through all their possible behaviors This book contains

8 original research articles dealing with a broad range of topics ranging from algorithms data structures and implementation techniques for high performance sparse multivariate polynomial arithmetic over the integers and rational numbers over methods for certifying the isolated zeros of polynomial systems to computer algebra problems in quantum computing

Early Algebra Carolyn Kieran, Jeong Suk Pang, Deborah Schifter, Swee Fong Ng, 2016-07-11 This survey of the state of the art on research in early algebra traces the evolution of a relatively new field of research and teaching practice With its focus on the younger student aged from about 6 years up to 12 years this volume reveals the nature of the research that has been carried out in early algebra and how it has shaped the growth of the field The survey in presenting examples drawn from the steadily growing research base highlights both the nature of algebraic thinking and the ways in which this thinking is being developed in the primary and early middle school student Mathematical relations patterns and arithmetical structures lie at the heart of early algebraic activity with processes such as noticing conjecturing generalizing representing justifying and communicating being central to students engagement

Discrete Mathematics and Symmetry Angel Garrido,2020-03-05 Some of the most beautiful studies in Mathematics are related to Symmetry and Geometry For this reason we select here some contributions about such aspects and Discrete Geometry As we know Symmetry in a system means invariance of its elements under conditions of transformations When we consider network structures symmetry means invariance of adjacency of nodes under the permutations of node set The graph isomorphism is an equivalence relation on the set of graphs Therefore it partitions the class of all graphs into equivalence classes The underlying idea of isomorphism is that some objects have the same structure if we omit the individual character of their components A set of graphs isomorphic to each other is denominated as an isomorphism class of graphs The automorphism of a graph will be an isomorphism from G onto itself The family of all automorphisms of a graph G is a permutation group
