COMPUTER NETWORKS The way of interconnecting and communicating people with other people Dr Kranthi Kumar Singamaneni, Mrs Vijaya Saraswathi Redrowthu & Mrs Vasavi Ravuri,2020-08-07 1 1 INTRODUCTION Computer Networks A collection of autonomous computers interconnected by a single technology to facilitate data communication Two computers are said to be interconnected if they are able to exchange information The connection need not be via a copper wire fiber optics microwaves infrared and communication satellites can also be of used The computers are autonomous which are not forcibly started stopped or controlled by other one A system with one control unit and more than one slave is not a computer network Computer network consists of end systems or nodes which are capable of transmitting information and which communicate through a transit system interconnected them The transit system also called as interconnection subsystem or sub network The nodes in the computer network comprise the computer terminals software and peripherals forming an autonomous system capable of performing information processing End system has an interface or interaction through which it is physically connected with subnet The interaction point has an address by which end system is identified

Each end system hosts one or more application entities by which the communication takes place between end systems. The subnet performs all transmission and switching activities. Transmission media connect end system and subnet and carry information.
