Tutorial CEPAT & MUDAH FUZZY LOGIC dengan MATLAB DR. Eng. Agus Naba, 2009-11-01 Dengan fuzzy logic transfer kecerdasan yang dimiliki manusia ke dalam robot komputer dan bahkan alat elektronik sehari-hari telah menjadi mudah seperti mesin cuci, kamera, microwave, dan lain-lain telah mampu berpikir seperti manusia berkat penerapan fuzzy logic. MATLAB telah menyediakan Fuzzy Logic Toolbox yang berisi kumpulan fungsi-fungsi siap pakai untuk merancang bangun sistem fuzzy. Bagi mereka yang berlatar belakang non komputer, MATLAB menyediakan Graphical User Interface (GUI) suatu alat bantu interaktif yang didesain khusus untuk perancangan sistem fuzzy logic dengan mudah bahkan untuk seorang pemula. Buku ini akan memandu Anda step by step dengan cepat dan mudah dalam memahami konsep fuzzy logic. Pada saat yang sama, Anda bisa menguasai MATLAB terutama Fuzzy Logic Toolbox-nya karena panduan-panduan yang diberikan dalam buku ini dilakukan dengan langsung berinteraksi dengan MATLAB. Dan melalui buku ini pula, Anda akan mampu dan siap merancang sendiri sistem fuzzy logic untuk aplikasi di bidang Anda. *Evolving Connectionist Systems* Nikola K. Kasabov, 2007-08-23 This second edition of the must read work in the field presents generic computational models and techniques that can be used for the development of evolving adaptive modeling systems as well as new trends including computational neuro genetic modeling and quantum information processing related to evolving systems. New applications such as autonomous robots, adaptive artificial life systems, and adaptive decision support systems are also covered.

Evolving Connectionist Systems Nikola Kasabov, 2013-03-14 Many methods and models have been proposed for solving difficult problems such as prediction, planning, and knowledge discovery in application areas such as bioinformatics, speech, and image analysis. Most, however, are designed to deal with static processes which will not change over time. Some processes such as speech, biological information, and brain signals are not static, however, and in these cases different models need to be used which can trace and adapt to the changes in the processes in an incremental, on-line mode and often in real time. This book presents generic computational models and techniques that can be used for the development of evolving adaptive modelling systems. The models and techniques used are connectionist based as the evolving brain is a highly suitable paradigm and where possible existing connectionist models have been used and extended. The first part of the book covers methods and techniques and the second focuses on applications in bioinformatics, brain study, speech, image, and multimodal systems. It also includes an extensive bibliography and an extended glossary. *Evolving Connectionist Systems* is aimed at anyone who is interested in developing adaptive models and systems to solve challenging real world problems in computing science or engineering. It will also be of interest to researchers and students in life sciences who are interested in finding out how information science and intelligent information processing methods can be applied to their domains.
