1918-1928 Laurent Mazliak,Rossana Tazzioli,2021-03-27 This book is a consequence of the international meeting organized in Marseilles in November 2018 devoted to the aftermath of the Great War for mathematical communities It features selected original research presented at the meeting offering a new perspective on a period the 1920s not extensively considered by historiography After 1918 new countries were created and borders of several others were modified Territories were annexed while some countries lost entire regions These territorial changes bear witness to the massive and varied upheavals with which European societies were confronted in the aftermath of the Great War The reconfiguration of political Europe was accompanied by new alliances and a redistribution of trade commercial intellectual artistic military and so on which largely shaped international life during the interwar period These changes also had an enormous impact on scientific life not only in practice but also in its organization and communication strategies The mathematical sciences which from the late 19th century to the 1920s experienced a deep disciplinary evolution were thus facing a double movement internal and external which led to a sustainable restructuring of research and teaching Concomitantly various areas such as topology functional analysis abstract algebra logic or probability among others experienced exceptional development This was accompanied by an explosion of new international or national associations of mathematicians with for instance the founding in 1918 of the

International Mathematical Union and the controversial creation of the International Research Council Therefore the central idea for the articulation of the various chapters of the book is to present case studies illustrating how in the aftermath of the war many mathematicians had to organize their personal trajectories taking into account the evolution of the political social and scientific environment which had taken place at the end of the conflict

Parabolic Systems with Polynomial Growth and Regularity Frank Duzaar, Giuseppe Mingione, Klaus Steffen, 2011 The authors establish a series of optimal regularity results for solutions to general non linear parabolic systems $u_t - \operatorname{div} a(x, t, u) Du = H$ under the main assumption of polynomial growth at rate p i.e. $a(x, t, u) Du \leq L(1 + |Du|^p)$ $p \geq 2$ They give a unified treatment of various interconnected aspects of the regularity theory optimal partial regularity results for the spatial gradient of solutions the first estimates on the parabolic Hausdorff dimension of the related singular set and the first Calderon Zygmund estimates for non homogeneous problems are achieved here
