Comprehensive Medicinal Chemistry Corwin Hansch, Peter George Sammes, John Bodenhan Taylor, 1990 Drug design is a multi disciplinary activity involving chemists biologists biochemists pharmacologists and many others the chemist's role is central in inventing new compounds which exert a beneficial effect However once a lead for a new active drug has been established its effective delivery has to be demonstrated and extensive toxicological studies undertaken to demonstrate its safety before clinical trials can commence The metabolic fate of the drug has to be revealed and detailed distribution studies carried out in order to satisfy the regulatory authorities before the new compound can be marketed Comprehensive Medicinal Chemistry describes all these aspects of the design of a drug whilst centering on the chemical mechanism whereby such agents act Volume 6 includes a unique drug compendium containing information on over 5500 compounds currently on the market
