Chapter 26

Chapter 26: The Origin of Life on Earth

Key Concepts:

- 1. Theories about the origin of life on Earth: There are several theories about how life first began on our planet. The most popular theory is that life began in the oceans, where simple organic molecules were able to combine and form more complex life forms. Another theory suggests that life may have originated on land, in hot springs or other warm environments.*
- 2. The Miller-Urey experiment: In the 1950s, scientists Stanley Miller and Harold Urey conducted an experiment that showed how simple organic molecules could combine to form*

Goodman and Marshall's Recognizing and Reporting Red Flags for the Physical Therapist Assistant - E-Book

Charlene Marshall, 2024-05-31 Goodman and Marshall's Recognizing and Reporting Red Flags for the Physical Therapist Assistant 2nd Edition helps you develop essential skills for recognizing signs and symptoms that can compromise patient care. It presents a consistent three-step model for monitoring patients for red flags relating to neuromuscular and musculoskeletal problems, medical diseases, side effects of medications, and other comorbidities that may be unknown to the PT. Combining the insights of a physical therapist and a physical therapist assistant, this resource is unmatched in providing clear guidelines for finding and documenting red flags. NEW eBook version is included with print purchase, allowing access to all the text, figures, and references with the ability to search, customize content, make notes and highlights, and have content read aloud. Plus Patient Scenarios and Review Questions are included in the eBook included with print purchase. UPDATED Revised content throughout provides the most current information needed to be an effective practitioner. UPDATED References ensure content is current and applicable for today's clinical practice. Coverage of warning flags includes red and yellow flags, risk factors, clinical presentation, signs and symptoms, helpful screening clues, and guidelines for communicating with the PT, allowing you to quickly recognize the need for any re-evaluation of the patient. Three-step approach to formative assessments of physical therapy patients provides a consistent way to watch for and report on adverse changes such as range of motion, strength, pain, balance, coordination, swelling, endurance, or gait deviations. PTA Action Plans show the clinical application of text material relating to observing, documenting, and reporting red or yellow flags to the physical therapist. Clinically relevant information includes the tools needed to monitor the patient's response to selected interventions and accurately and quickly report changes to the supervising PT. Cognitive processing reasoning approach encourages you to gather and analyze data, pose and solve problems, infer, hypothesize, and make clinical judgments so that you can notify the supervising PT of clients who need further evaluation or may require a referral or consultation with other health care professionals. Case examples and critical thinking activities connect theory to practice, showing the role of the PTA and how the PTA can integrate clinical observations with clinical reasoning skills. Picture the Patient sections address what to look for when assessing or working with patients, especially typical red flag signs and symptoms of emerging problems. Full-color illustrations and design clearly demonstrate pathologies and processes and make lookup easier in busy clinical settings. Key terminology is listed in each chapter, with each term bolded within the chapter and defined in a back-of-book glossary. Summary boxes and tables highlight key information for quick reference.

Undernutrition in the Philippines Nkosinathi V. N. Mbuya, Gabriel

Demombynes, Sharon Faye A. Piza, Ann Jillian V. Adona, 2021-05-25 For nearly 30 years, the rates of both wasting and stunting in the Philippines have been nearly flat. For 2019, the rate of stunting among children under five years of age was 28.8 percent, which was only slightly lower than in 2008 (32 percent). The prevalence of underweight in 2019 was 19 percent, and that of wasting

was 6 percent Based on the World Health Organization's classification of undernutrition rates the stunting prevalence of children in the Philippines is of very high public health significance The Philippines 29 percent stunting rate places it fifth among countries in the East Asia and Pacific region and among the top 10 countries globally The Philippines high levels of childhood undernutrition can lead to a staggering loss of the country's human and economic potential The burden on the Philippines economy brought by childhood undernutrition was estimated at US 4.4 billion or 1.5 percent of the country's GDP in 2015 Undernutrition robs Filipino children of their chance at a bright future When viewed through the lens of the World Bank's Human Capital Index (HCI) the country's 2020 HCI score of 0.52 predicts that the future productivity of children born today will be 48 percent below what they might achieve if they were to enjoy complete education and full health Undernutrition in the Philippines Scale Scope and Opportunities for Nutrition Policy and Programming presents a comprehensive analytical work on this topic It provides evidence of why it is critical that the government of the Philippines prioritize tackling this persistent challenge The report assesses the determinants and causes of childhood undernutrition and reviews current policies and programs directed at addressing this problem Based on these analyses the report provides recommendations of how national policies and programs can be strengthened to reduce the high rates of undernutrition in the country It sets out to inform the debate on the causes and potential solutions of undernutrition while identifying high priority policies and policy commitments for action
