Plotinus-Arg Philosophers Lloyd P. Gerson, 2012-08-21 First published in 1999 We are fortunate in possessing a fascinating document The Life of Plotinus written by the philosopher Porphyry a pupil and associate of Plotinus for the last eight years of his life The basic facts contained in this Life can be quickly recounted Plotinus was likely a Greek born in Egypt in AD 205 It is possible though that he came from a Hellenized Egyptian or Roman family In his 28th year Plotinus discovered in himself a thirst for philosophy This is a collection of his works Ennead I contains treatises on what Porphyry calls ethical matters Enneads II III contain treatises on natural philosophy or cosmology with some rationalizations for the inclusion of III 4 5 7 and 8 Ennead IV concerns the soul V Intellect or and VI being numbers and the One The thematic unity of Enneads I IV and V is somewhat greater than the rest

Almost Global Solutions of Capillary-Gravity Water Waves Equations on the Circle Massimiliano Berti, Jean-Marc Delort, 2018-11-02 The goal of this monograph is to prove that any solution of the Cauchy problem for the capillary gravity water waves equations in one space dimension with periodic even in space small and smooth enough initial data is almost globally defined in time on Sobolev spaces provided the gravity capillarity parameters are taken outside an exceptional subset of zero measure In contrast to the many results known for these equations on the real line with decaying Cauchy data one cannot make use of dispersive properties of the linear flow Instead a normal forms based procedure is used eliminating those contributions to the Sobolev energy that are of lower degree of homogeneity in the solution Since the water waves equations form a quasi linear system the usual normal forms approaches would face the well known problem of losses of derivatives in the unbounded transformations To overcome this after a parilinearization of the capillary gravity water waves equations we perform several paradifferential reductions to obtain a diagonal system with constant coefficient symbols up to smoothing remainders Then we start with a normal form procedure where the small divisors are compensated by the previous paradifferential regularization The reversible structure of the water waves equations and the fact that we seek solutions even in space guarantees a key cancellation which prevents the growth of the Sobolev norms of the solutions

Art Meets Mathematics in the Fourth Dimension Stephen Leon Lipscomb, 2014-10-13 To see objects that live in the fourth dimension we humans would need to add a fourth dimension to our three dimensional vision An example of such an object that lives in the fourth dimension is a hyper sphere or 3 sphere The quest to imagine the elusive 3 sphere has deep historical roots medieval poet Dante Alighieri used a 3 sphere to convey his allegorical vision of the

Christian afterlife in his Divine Comedy In 1917 Albert Einstein visualized the universe as a 3 sphere describing this imagery as the place where the reader s imagination boggles Nobody can imagine this thing Over time however understanding of the concept of a dimension evolved By 2003 a researcher had successfully rendered into human vision the structure of a 4 web think of an ever increasingly dense spider s web In this text Stephen Lipscomb takes his innovative dimension theory research a step further using the 4 web to reveal a new partial image of a 3 sphere Illustrations support the reader s understanding of the mathematics behind this process Lipscomb describes a computer program that can produce partial images of a 3 sphere and suggests methods of discerning other fourth dimensional objects that may serve as the basis for future artwork
