As the work is divided into chapters the subjects of which are complete in themselves the pupil may commence the study of the structure use and laws of the several parts of which the human system is composed by selecting such chapters as fancy or utility may dictate without reference to their present arrangement as well commence with the chapter on the digestive organs as on the bones The acquisition of a correct pronunciation of the technical words is of great importance both in recitation and in conversation In this work the technical words interspersed with the text have been divided into syllables and the accented syllables designated An ample Glossary of technical terms has also been appended to the work to which reference should be made Agesilaus king of Sparta when asked what things boys should learn replied Those which they will practise when they become men As health requires the observance of the laws inherent to the different organs of the human system so not only boys but girls should acquire a knowledge of the laws of their organization If sound morality depends upon the inculcation of correct principles in youth equally so does a sound physical system depend on a correct physical education during the same period of life If the teacher and parents who are deficient in moral feelings and sentiments are unfit to communicate to children and youth those high moral principles demanded by the nature of man so are they equally incompetent directors of the physical training of the youthful system if ignorant of the organic laws and the physiological conditions upon which health and disease depend For these reasons the study of the structure of the human system and the laws of the different organs are subjects of interest to all the young and the old the learned and the unlearned the rich and the poor Every scholar and particularly every young miss after acquiring a knowledge of the primary branches as spelling reading writing and arithmetic should learn the structure of the human system and the conditions upon which

health and disease depend as this knowledge will be required in practice in after life It is somewhat unaccountable says Dr Dick and not a little inconsistent that while we direct the young to look abroad over the surface of the earth and survey its mountains rivers seas and continents and guide their views to the regions of the firmament where they may contemplate the moons of Jupiter the rings of Saturn and thousands of luminaries placed at immeasurable distances that we should never teach them to look into themselves to consider their own corporeal structures the numerous parts of which they are composed the admirable functions they perform the wisdom and goodness displayed in their mechanism and the lessons of practical instruction which may be derived from such contemplations Again he says One great practical end which should always be kept in view in the study of physiology is the invigoration and improvement of the corporeal powers and functions the preservation of health and the prevention of disease
